Engineering and Design
CONSTRUCTION EQUIPMENT OWNERSHIP AND
OPERATING EXPENSE SCHEDULE

1. Purpose. This pamphlet is authorized by and established consistent with Federal Acquisition Regulation (FAR) 31.105 and USACE Acquisition Instructions (UAI) Subpart 5131.1 Applicability, 5131.105 Construction and Architect-Engineer (A-E) Contracts. This pamphlet establishes predetermined equipment ownership and operating expense rates for construction equipment. This pamphlet also establishes a method to calculate equipment ownership and operating expense rates for construction equipment when the predetermined rates are not considered appropriate. The overall intent of this pamphlet is to determine equipment costs that are fair and reasonable. Expense factors for calculating dredge plant and marine equipment costs are provided in chapter 4.

2. Applicability. This pamphlet applies to all USACE commands. It is applicable to all solicitations and contracts for construction expected to exceed the Simplified Acquisition Threshold of $150,000 when actual cost data for both ownership and operating costs cannot be determined. The pamphlet is published in 12 volumes and a description of each volume's corresponding geographic region is provided in appendix A.

3. Distribution Statement. Approved for public release. Distribution is unlimited.

4. Records Management (Record Keeping) requirements. Records management requirements for all record numbers, forms, and reports associated with this pamphlet are included in the Army's Records Retention Schedule – Army (RRS-A). Detailed information for all record numbers, forms, and reports associated with this pamphlet are located in the RRS-A at https://www.arims.army.mil.

5. References. See appendix A.

LEFT BLANK INTENTIONALLY

Chapter 1
Introduction

1.1 Use. The use of this pamphlet is for rate determination on construction contracts, dredging contracts, and negotiated procurements, and relates only to contractor-owned equipment. The overall intent of the pamphlet is to determine equipment costs that are fair and reasonable.

a. This pamphlet will be used for determining hourly equipment rates that are contained in the independent government estimate.

b. The use of this pamphlet will be required by contractors for pricing contractor-owned equipment in negotiated procurements when:

(1) Cost or pricing data is not required, as defined in FAR Part 15.4, Contract Pricing.

(2) Actual cost or pricing data is required and the actual cost data to support either ownership or operating costs for equipment or equipment groups of similar model and series is not available from the contractor's accounting records.

(3) Cost or pricing data is required and available, but all or part of the data is determined not to be consistent with the FAR cost principles.

1.2 Regions. This pamphlet is published in 12 volumes; each volume uses pricing and factors developed for a specific geographic region. The pamphlet's volume numbers correspond to its respective regions. A listing of the volumes, along with a description of the geographic region, is contained in appendix A.

1.3 Decision Flow Process. A flow chart (figure 1-1) is provided at the end of this chapter to help the user better understand the process for developing an hourly equipment rate. The flow chart shows the decision points that allow the user to decide whether to use the predetermined rate tables, or calculate the rate using the method shown in figure 2-1 or using CHECKRATE (also see paragraph 3.4).

1.4 How to Obtain Assistance. When assistance is needed in understanding the methodology for calculating equipment rates, contact the Cost Engineering Branch, Engineering and Construction Division, Walla Walla District, U.S. Army Corps of Engineers, (CENWW-ECE), 509-527-7542, 509-527-7510, or visit the website at http://www.nww.usace.army.mil/.

1.5 How to Obtain CHECKRATE. A Microsoft Excel® workbook named "CHECKRATE" enables the user to calculate equipment rates using the methodology required by this pamphlet. The user must have Microsoft Excel® to run the application. The factors needed in the hourly cost calculations are located in the appendices of this pamphlet. A copy of the workbook may be obtained by going to the Cost Engineering web page on the Walla Walla District website, http://www.nww.usace.army.mil/,

selecting “Missions,” and selecting “Cost Engineering.” Under “Product Support,” click on the plus sign next to “Construction Equipment Rates (EP 1110-1-8) and CHECKRATE,” then select the “Download CHECKRATE” link.

1.6 How to Obtain this Publication. Volumes 1-12 of this Engineer Pamphlet are available in portable document format (PDF) and can be viewed or downloaded at the official HQUSACE documents web page at http://www.usace.army.mil/. Select “Library” and click on “Publications.” Hover your mouse pointer over “USACE Publications” in the title bar; a dropdown menu will appear. From the dropdown menu, select “Engineer Pamphlets.” Additional instructions are located in appendix A.

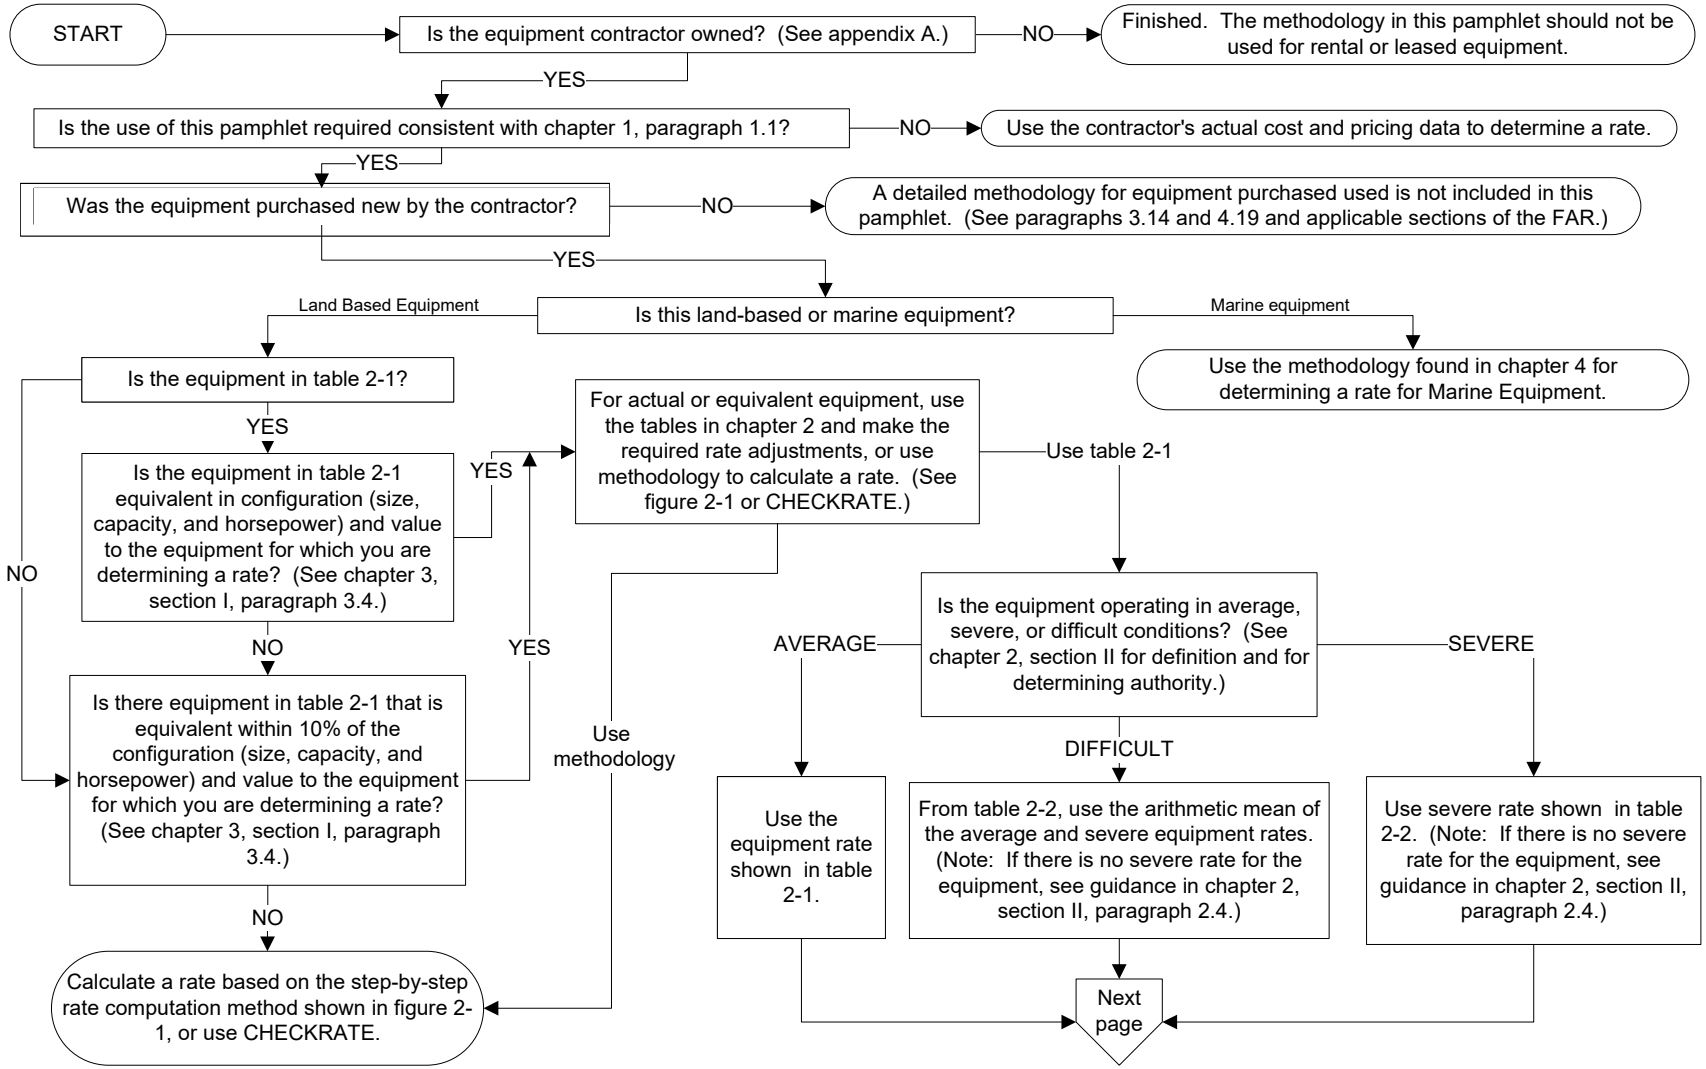

Figure 1-1. Methodology for Developing an Hourly Ownership and Operating Rate for Construction Equipment

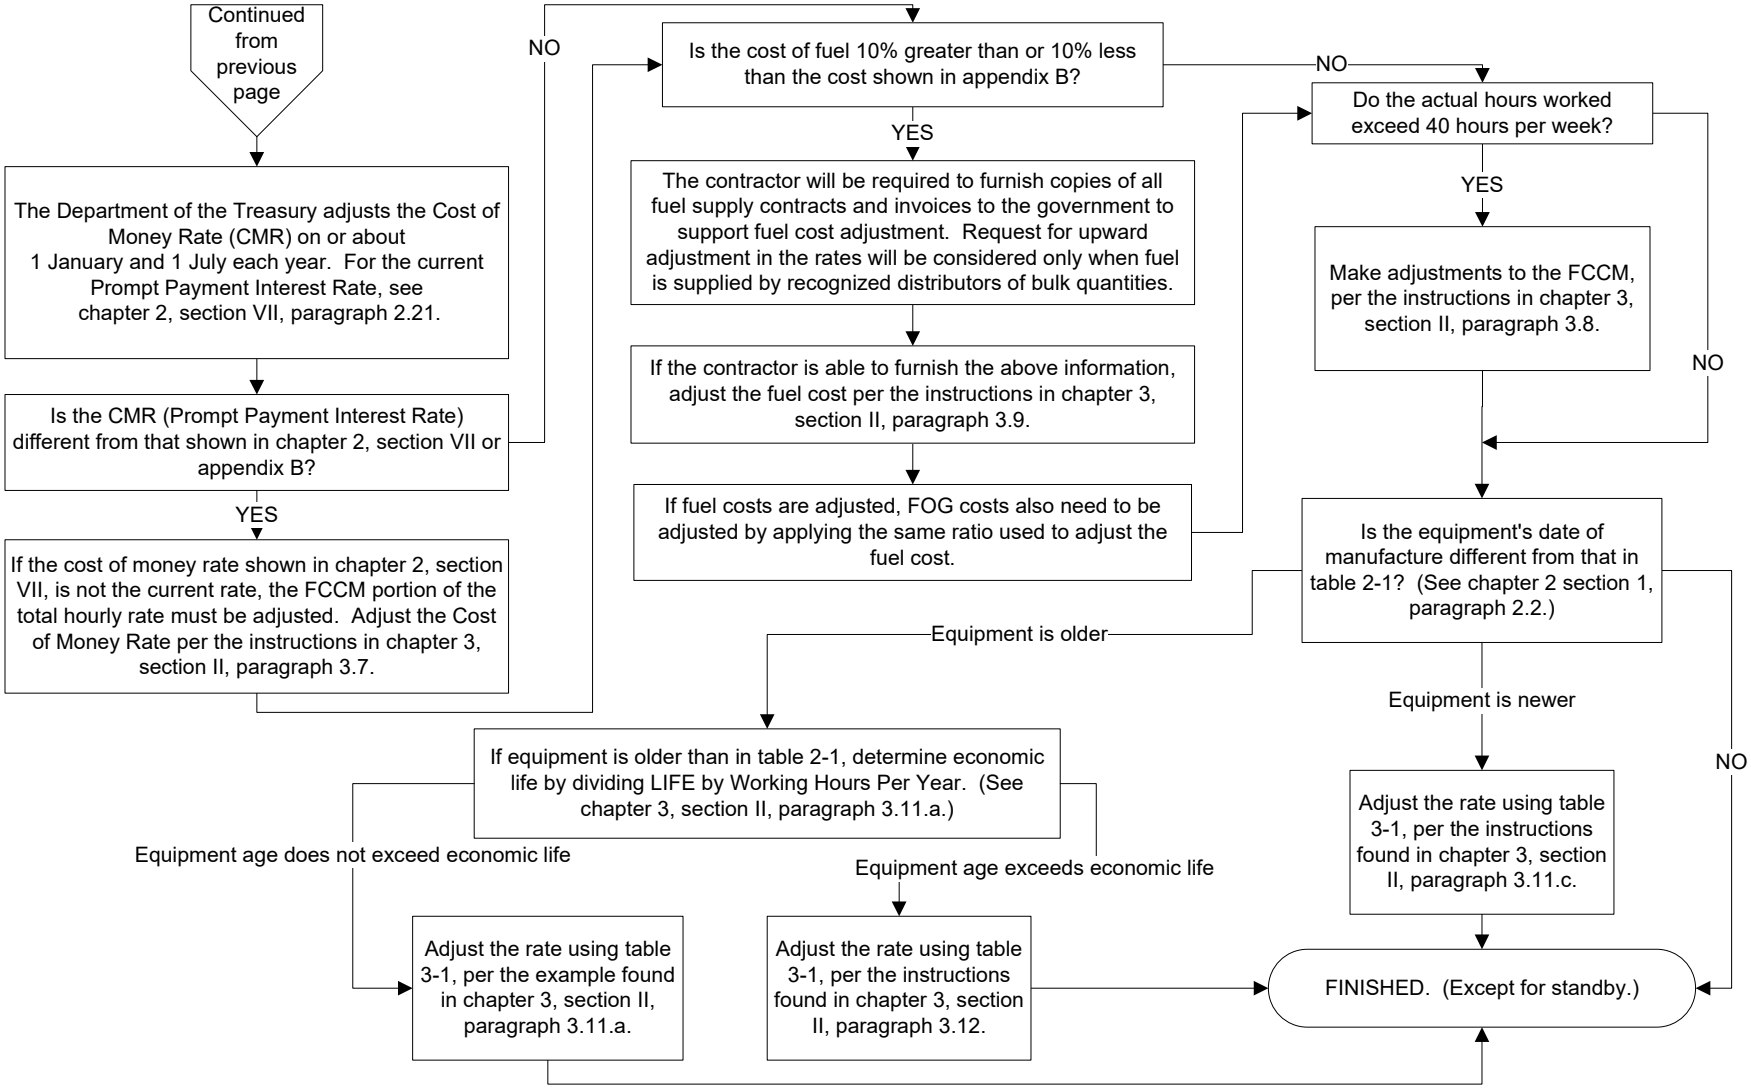

Figure 1-1. Methodology for Developing an Hourly Ownership and Operating Rate for Construction Equipment

Chapter 2
Methodology for Construction Equipment

SECTION I. GENERAL

2.1 Contents. This chapter provides the methodology used to compute the total hourly ownership and operating rates for construction equipment and marine equipment (except dredging plant). This detailed methodology includes the formulas and factors used to develop both total hourly rates and hourly standby rates. If the equipment is determined to be older than its estimated economic life (overage), or was purchased used, refer to chapter 3.

2.2 Basis for Equipment Rates. The hourly rates shown in table 2-1 reflect catalog list prices of equipment manufactured in 2015 (3 years old). List prices for equipment manufactured in years other than 2015 have been adjusted to a 2015 price level using economic indices. Ownership and operating expenses are computed using area factors, found in appendix B, which are specific to each region and volume. This hourly rate methodology assumes that equipment furnished to the job is in sound, workable condition. Furthermore, the methodology applies only to equipment that prime contractors or subcontractors either own or control. These hourly rates and cost factors do not represent rental charges for those in the business of renting equipment.

2.3 Total Hourly Rate. Hourly rates for average conditions are shown in table 2-1 and are computed based on a 40-hour (hr) workweek. The hourly rate is the sum of ownership and operating costs. Table 2-2 contains all individual rate elements for both average and severe conditions. An example of the methodology used to compute the total hourly rate is shown in figure 2-1. For standby calculation, see section IX.

a. Ownership Cost Elements. The ownership portion of the rate consists of an allowance for depreciation (DEPR) and facilities capital cost of money (FCCM).

b. Operating Cost Elements. Operating costs include allowances for the following:

(1) Fuel.

(2) Filters, oil, and grease (FOG) (includes servicing).

(3) Repairs (includes maintenance and major overhauls).

(4) Tire wear (replacement).

(5) Tire repair.

c. Exclusions to Hourly Rates. Total hourly rates for owning and operating equipment do not include allowances for the following (it should also be noted that replacement cost is not included in the rates, as it is not an allowable item of cost per FAR 31.105(d)(2)(i)):

(1) Operating labor.

(2) Mobilization and demobilization.

(3) Field office overhead expenses.

(4) Home office or general and administrative (G&A) overhead expenses.

(5) Investment tax credit.

(6) Contingency allowance.

(7) Profit.

(8) Parts and labor escalation.

d. Other Ownership Elements. The following elements of cost are not included in the total hourly rates. These costs are allowable and would normally be included in the contractor's field office or home office overhead rate calculation.

(1) License fees, property taxes, storage, and insurance costs are considered indirect costs and are not included in the total hourly rates.

(2) Jobsite security, inspection fees, recordkeeping, mechanic training, and highway permits are also not included in the total hourly rates.

SECTION II. OPERATING CONDITIONS

2.4 Average, Difficult, or Severe Conditions. Operating conditions may be average, difficult, or severe. Hourly rates for both average and severe operating conditions are determined according to appendix C. The rate for the difficult condition is the arithmetic mean of the average and the severe rates. When only the average rate is shown in table 2-2, the rate applies for all operating conditions or as determined by the contracting officer. Average condition rates are included in both tables 2-1 and 2-2. Only table 2-2 contains the severe condition rates.

2.5 Determination of Condition. For contract modifications, the condition will be average until the contracting officer determines the equipment operating condition to be used. This determination is based on contract specifications, site conditions, supporting evidence, and guidance in appendix C. Evaluation of operating conditions for equipment not listed in appendix C will be consistent with examples shown in appendix C. The operating condition of the equipment relates to the average and severe factors, as detailed in appendix D. For standby, the average condition will be used, unless a separate determination is made by the contracting officer.

SECTION III. EQUIPMENT SELECTION

2.6 General. Equipment shown in table 2-1 is representative of equipment that is used in general construction. Note that some equipment may require additional attachments or accessories. Each unit of equipment is grouped into a main group called a category (CAT) and a subgroup called a subcategory (SUB). This type of grouping is displayed in table 2-1 and appendix D. Also, an identification number (ID No.) is assigned to each unit of equipment. The ID No. consists of three parts. The first three characters are the CAT, the second two characters are the manufacturer's code, and the last three characters are the sequence number.

2.7 Truck Selection. Because of the large number of possible combinations of highway truck chassis and bodies, both are listed separately. For estimating purposes, use the gross vehicle weight (GVW) rating of the truck chassis to make a selection with the following conditions:

a. The combined weight of the truck chassis, truck body, and payload must not exceed the GVW rating shown for the truck chassis.

b. The gross combined weight (GCW) of the truck, trailer, and payload must not exceed the GCW rating shown.

2.8 Crawler Tractor Selection. A wide range of combinations of ripper and various blade options are available for each crawler tractor. For ease of use, all tractors include a universal blade attachment. Other blade and ripper attachments are shown separately and should be substituted for the universal blade to match actual equipment configuration. Only the hourly expense for attachments required to perform the work will be allowed.

2.9 Equipment Accessories. Equipment accessories included on the major pieces of equipment in table 2-1 are listed in appendix J.

SECTION IV. EQUIPMENT VALUE

2.10 List Price and Accessories. The total list price includes those accessories normally purchased by the contractor plus required safety features.

2.11 Discount Code (DC). A 7.5-percent discount is used for all equipment except highway trucks that are discounted at 15 percent. The total discounted price is derived by subtracting the appropriate discount from the total list price. The identification of the discount is shown in appendix D under column heading DC. Two codes are used to identify the discount, B equals the basic discount of 7.5 percent and S equals the special discount of 15 percent.

2.12 Sales or Import Tax. Total state sales tax (which includes local taxes) or import tax is computed as a percentage of the discounted price. The average tax for the region is shown in appendix B.

2.13 Freight. Estimated allowances for freight are provided in appendix B. This allowance includes preparation and delivery. Multiply the shipping weight based on hundredweight (cwt) by the freight rate to determine freight charges.

2.14 Total Equipment Value (TEV). Freight is added to the total discounted price (which includes sales tax) to arrive at the TEV. The estimated TEV is indicated in table 2-1 under the column heading VALUE.

SECTION V. LIFE

2.15 Economic Life (LIFE). The expected economic life of the equipment will vary based on the type of equipment and the condition of use. It is established from manufacturers' or equipment associations' recommendations. The expected economic life in hours is given in appendix D, under the column heading LIFE, for both average and severe conditions.

2.16 Working Hours Per Year (WHPY). Annual average operating hours have been established for equipment working within the region covered by this pamphlet. The number of WHPY as shown in appendix B is equivalent to one year's use for a single shift operation. Average annual hours of use per year are determined by reducing the maximum available hours per year (40 hours per week, 52 weeks per year) to allow for lost working days due to the following factors:

a. Weather.

b. Employee holidays.

c. Equipment maintenance and repairs.

d. Mobilization and demobilization.

e. Miscellaneous downtime.

SECTION VI. SALVAGE VALUE

2.17 Salvage Value (SLV). The salvage value for equipment is based on advertisements of used equipment for sale, as displayed in current engineering and construction magazines, manufacturer's recommendations, and the Green Guide Volumes I and II, Handbook of New and Used Construction Equipment Values, Equipment Watch.

2.18 Salvage Value Percentage. The salvage value percentage used for each type of equipment is listed in appendix D under the heading SLV as a percentage of the equipment value. It is equal for both average and severe conditions.

SECTION VII. OWNERSHIP COST

2.19 Ownership Elements. The ownership portion of the rate consists of allowances for depreciation (DEPR) and facilities capital cost of money (FCCM). These two cost elements are computed based on the TEV. Other ownership elements may be allowed (see paragraph 2.3d). Total ownership rate per hour is expressed by formula, as follows:

$$\text{Ownership Rate/hr} = \text{DEPR/hr} + \text{FCCM/hr}$$

2.20 Depreciation. The straight-line method is used to compute depreciation.

a. For rubber-tired equipment, the tire cost index (TCI) must first be calculated to complete the depreciation formula.

b. Hourly depreciation is calculated by dividing the "depreciable" value (TEV less estimated salvage and tire cost) by the expected economic life of the unit of equipment in hours. Expressed by formula, depreciation cost equals the following:

$$\text{DEPR/hr} = \frac{[[(\text{TEV})(1 - \text{SLV})] - [(\text{TCI})(\text{Tire Cost})]]}{\text{LIFE}}$$

Where:

(1) TEV is the total equipment value found in table 2-1.

(2) SLV is the salvage value from appendix D.

(3) TCI is the tire cost index, which is determined by dividing the year of manufacture tire index by the present-year tire index. For table 2-1, the present year is 2018 and the year of manufacture is 2015 (3 years old). These indices are listed as part of appendix E (see Economic Key (EK) 100, All Tires and Tubes).

(4) Tire cost is the total tire and/or conveyor belt cost. The total tire cost is the sum of the cost of all front, drive, and trailing tires. The tire cost for rubber-tired equipment is based on tire values at the time the equipment was manufactured.

(5) The LIFE is the economic life, which is based on the number of operating hours throughout the economic life of the equipment (see paragraph 2.15). Hours for LIFE are provided in appendix D.

2.21 Facilities Capital Cost of Money (FCCM). The FCCM, as defined in FAR 31.205-10, is included in the total hourly rates. This cost is computed by multiplying a discounted cost of money rate (CMR) by the average value of equipment and prorating the result over the annual operating hours. The July 2018 CMR [3.500 percent as shown in appendix I, determined by the Secretary of the Treasury pursuant to Public Law 92-41 (85 Stat. 97)], is discounted to avoid duplication when applying estimated markups (an assumed 25 percent) for overhead and profit. The discounted CMR is

then 2.80 percent. The Department of the Treasury adjusts the CMR on or about 1 January and 1 July each year; these revisions are printed in the Federal Register, or can be found at https://www.fiscal.treasury.gov/fsservices/gov/pmt/promptPayment/rates.htm. The CMR should be adjusted to the actual period that the equipment is used. Expressed by formula, FCCM cost equals the following:

$$\text{FCCM/hr} = \frac{(\text{TEV})(\text{AVF})(\text{discounted CMR})}{(\text{WHPY})}$$

Where:

a. TEV is the total equipment value found in table 2-1.

b. $\text{Average Value Factor (AVF)} = [[(\text{N} - 1)(1 + \text{SLV})] + 2] / 2\text{N}$.

c. Number of Years (N) in Depreciation Period = LIFE/WHPY.

d. LIFE is the economic life, which is based on the number of operating hours throughout the economic life of the equipment (see paragraph 2.15). Hours for LIFE are provided in appendix D.

e. Discounted CMR = 3.500% (Jul – Dec 2018 rate) / 1.25 = 2.80%.

f. WHPY = Working hours Per Year found in appendix B.

SECTION VIII. OPERATING COST

2.22 Operating Cost Elements. The total operating cost is the sum of the following five elements: Fuel, FOG, repairs, tire wear, and tire repair.

2.23 Fuel Cost. Fuel costs are computed for each gas, diesel, or electric engine. When the unit of equipment has two engines, as in the case of a truck crane, this methodology treats each engine separately for fuel costs. The hourly fuel cost for each unit of equipment is shown under the column heading FUEL in tables 2-1 and 2-2. When the unit of equipment has no engine, no fuel cost will be shown. Hourly fuel costs are calculated for each engine, as expressed in the following formula:

Fuel Cost/hr = Horsepower (hp) x Fuel Cost/Gallon (gal) x Fuel Factor (gal/bhp-hr)

a. Horsepower is the engines rated horsepower. All horsepower ratings for engine-driven equipment are listed with the equipment description in table 2-1.

b. Fuel Cost/Gallon is based on values shown in appendix B. See chapter 3 for fuel cost adjustments.

c. Fuel Factor – Gas or Diesel Fuel. The fuel factor in gallons per brake horsepower-hour (bhp-hr) is listed in appendix D for both average and severe

conditions. Fuel factors are also listed for both the engine powering the main equipment (prime engine) and the engine providing power to the carrier vehicle. For severe conditions, the fuel consumption rate is 30 percent greater than the average condition rate. Gas or diesel fuel factors are computed by using the following formula:

$$\text{Fuel Factor (Gal/bhp - hr)} = \frac{\text{Horsepower Factor (HPF) x lbs Fuel per bhp - hr}}{\text{lbs of Fuel per Gal}}$$

Where:

(1) HPF is the horsepower factor used in the fuel and electricity consumption formulas and represents an average percent of full-rated horsepower being used by the engine. The fuel consumption factors, which are shown in appendix D under column headings Equipment Fuel Factors and Carrier Fuel Factors, are computed based on the HPF shown under these column headings. This HPF is an estimate of the engine load under average working conditions. It is necessary to modify the rated horsepower as engines and motors in actual production do not work at their full-rated horsepower at all times. Periods spent at idle, travel in reverse, traveling empty, close maneuvering at part throttle, and operating downhill are examples of conditions that reduce the HPF. Professional judgment regarding cycle time and equipment loading is applied to determine this average HPF. Normal field application can also vary according to: Operator efficiency, type of material, type of work cycle, and overall jobsite efficiency. This pamphlet provides an estimated average HPF, not a specific factor.

(2) Pounds (lbs) fuel per bhp-hr is an average based on a variety of engine applications from manufacturer engine data. The following represent an average of the normal application of equipment and are indicative of engine fuel consumption industrywide. Pounds fuel (consumed) per bhp-hr is based on the following averages and is used consistently throughout this pamphlet:

Gasoline = 0.55 lbs per bhp-hr

Diesel = 0.34 lbs per bhp-hr

(3) Pounds fuel per gallon is the factor that determines the weight of the fuel consumed. The following are used as constants in this pamphlet:

Gasoline = 6 lbs per gal

Diesel = 7 lbs per gal

d. Fuel Factor – Electricity. Assuming that an electric motor uses 1 kilowatt (kW) per horsepower (considering all inefficiencies), and using the same HPF for gas or diesel fuel consumption, the electricity consumption is computed by the following formula:

$$\text{Fuel Factor (kW/hr)} = \text{HPF x 1kW per electric hp - hr}$$

e. Fuel and Electricity Cost. The cost per gallon for gasoline and diesel fuel used to compute the hourly fuel cost is shown in appendix B. The hourly fuel cost for all gasoline-powered equipment, diesel-powered highway trucks, and truck crane carriers includes an allowance for Federal and state road taxes, sales taxes, and rental for fuel storage tanks and pumps. Cost per kilowatt-hour used to compute electricity cost is also shown in appendix B.

2.24 Filters, Oil, and Grease (FOG) Cost. The FOG cost is computed as a percentage of the hourly fuel costs.

a. The FOG contains items of cost for routine servicing of the equipment, which includes the following:

(1) Base wages for servicing labor.

(2) Fringe benefits and labor burden costs for servicing.

(3) Service truck, tools, and fuel truck allowance.

(4) Shop allowance, when shop servicing is required.

(5) Other equipment costs for servicing.

(6) FOG material allowance.

(7) Taxes and shipping for FOG supplies.

(8) Handling and disposal of hazardous materials and oil.

b. The hourly FOG cost is calculated for each engine using the following formula:

$$\text{FOG Cost/hr} = \text{FOG Factor} \times \text{Fuel Cost/hr} \times \text{LAF}$$

Where:

(1) The FOG Factor is the percent allowance expressed as a decimal factor under each fuel type heading: E (electricity), G (gas), and D (diesel). See appendix D.

(2) Fuel cost/hr is a calculated value shown under the column heading FUEL in tables 2-1 and 2-2.

(3) The labor adjustment factor (LAF) is a decimal factor to account for regional variations in labor and parts costs. This factor is provided in appendix B.

c. The FOG percentage allowance includes the cost for servicing. For equipment that is normally serviced by an oiler assigned to the unit of equipment, the FOG percentage is reduced. This reduction applies to the following equipment: Cranes, draglines, hydraulic excavators, and shovels (except equipment under category

numbers C75, C80.01, C85.11, C85.12, C85.21, C90.01, H25.11, H25.12, H30.01, H30.02, and M10.32).

d. When a unit of equipment has no engine (therefore no fuel costs calculated) and the equipment requires some type of fuel (i.e., propane, kerosene), an alternative hourly fuel and FOG allowance may be used in lieu of the regularly calculated fuel and FOG hourly costs. A FOG allowance may also be added when the equipment has no engine and has parts that require FOG. The alternative fuel allowance is added to the alternative FOG allowance for a total alternative fuel and FOG cost. (See figure 2-1, 5.c.)

2.25 Repair Cost.

a. The repair cost accounts for equipment repairs, maintenance, and major overhauls (including undercarriage wear, ground engaging tools, and designated attachments) performed in either the field or the shop. Where tire cost is the cost of the tires when the equipment was manufactured, use the same TCI and tire cost as shown in the depreciation calculation (see paragraph 2.20). The estimated hourly rate for repairs is computed as follows:

$$\text{Repair Cost/hr} = \frac{[(\text{TEV}) - [(\text{TCI})(\text{Tire Cost})]] \times \text{RF}}{\text{LIFE}}$$

Where:

(1) TEV is the total equipment value found in table 2-1.

(2) TCI is the tire cost index, which is determined by dividing the manufacture-year tire index by the present-year tire index. For table 2-1, the present year is 2018 and the manufacture year is 2015 (3 years old). These indices are listed as part of appendix E (see Economic Key (EK) 100, All Tires and Tubes).

(3) Tire cost is the total tire and/or conveyor belt cost. The total tire cost is the sum of the cost of all front, drive, and trailing tires. The tire cost for rubber-tired equipment is based on tire values at the time the equipment was manufactured.

(4) Repair factor (RF) is calculated as follows:

$$\text{RF} = \text{RCF} \times \text{EAF} \times \text{LAF}$$

Where:

(5) The repair cost factor (RCF) is shown in appendix D. This factor varies depending on the operating condition of the equipment (average or severe).

(6) The economic adjustment factor (EAF) is used to adjust the RCF to current price levels. The EAF is equal to the economic index for the present year divided by the

economic index for the year of manufacture. Indices listed in appendix E are used to develop the EAF. Economic indices are determined as follows:

(a) Economic Index for the Present Year. This is the economic index for the present year (2018 for table 2-1 calculations). Obtain the economic index from appendix E. The index is located in the column with the present year and the row with the type of equipment in question. When the column for the present year has not been included, the index can be estimated using a straight-line projection.

(b) Economic Index for the Year of Manufacture. This is the economic index for the year the equipment was manufactured (2015 for table 2-1 calculations). Obtain the economic index from appendix E. The index is located in the column with the year of manufacture and the row with the type of equipment in question. When the actual age of the equipment is beyond the last year of its economic life, the equipment is considered overage. Economic life is determined by dividing hours of LIFE (from appendix D) by WHPY (appendix B).

(7) The LIFE is the economic life, which is based on the number of operating hours throughout the economic life of the equipment (see paragraph 2.15). Hours for LIFE are provided in appendix D.

b. Items Included in the Repair Cost Factor. The estimated percentage allowances for the RCF are shown in appendix D under the column heading RCF and are expressed as decimal factors. These RCFs (for both the average and severe conditions) compensate for the following cost elements:

(1) Mechanic's labor, which includes base wages, fringe benefits, supervision, travel, and all other costs for labor associated with craft workers engaged in the direct repair of equipment, either in the field or the shop.

(2) Repair parts and supplies, which include those items that are required for all repairs and major overhauls, complete with applicable sales taxes and freight charges.

(3) Service trucks and other equipment used during field or shop repair and maintenance work, including tools.

(4) Supporting repair facilities, which include field and main repair shops, complete with parts and supplies inventory, and shop overhead.

2.26 Tire Wear Cost.

a. Tires included on rubber-tired equipment are generally the type and ply rating recommended as standard tires by the equipment manufacturer. Tire costs include both tire wear (replacement), and tire repair, as individual elements of cost. Conveyor belt wear is also included under this cost element. The belt wear is treated like tire wear. The wear factors are listed in the front tire wear factor column in appendix D. Belt life and cost are listed in appendix F.

b. The formula for calculating tire wear applies to each tire position: Front tire (FT), drive tire (DT), and trailing tire (TT). However, all tires performing the drive function are considered drive tires and are listed in the drive position. The total hourly tire wear cost for each unit of equipment is the sum of the hourly cost for each position. The total hourly tire wear cost equals the current cost of new tires, plus the cost of one recapping, divided by the expected life of the new tires, plus the life of the recapped tires. This hourly allowance for determining tire wear cost is expressed in the following formula:

$$\text{Tire Wear Cost/hr} = \frac{\text{Tire Cost Factor x Current Tire Cost}}{\text{Tire Life Factor x Tire Wear Factor x Maximum Tire Life}}$$

Where:

(1) Tire Cost Factor is estimated at 1.5, which represents the purchase of the original tire, plus one recap. It has been estimated that a recap costs approximately 50 percent of the new tire cost.

(2) Current Tire Cost is the estimated cost that applies to all tires on the equipment in that position. For example, four new drive tires valued at $500 each would result in an amount of $2,000 for total drive tire cost. The size and cost of each tire used in the pamphlet are listed for information in appendix F.

(3) Tire Life Factor is estimated at 1.8, which represents the original tire life, plus one recap. It has been estimated that a recap lasts approximately 80 percent of the life of a new tire.

(4) Tire Wear Factor is based on the position of the tire, type of equipment, and condition of use. Tire wear factors have been developed and are listed in appendix D. These factors will provide a percentage reduction to the maximum tire life. Appendix G contains the methodology used to develop these factors and a computation example for a rear dump wagon.

(5) Maximum Tire Life expressed in hours is shown for various new tire types in appendix F. The tire life is estimated from information provided by Goodyear Tire and Rubber Company and by using the method and tables in Production and Cost Estimating of Material Movement with Earthmoving Equipment, Terex Corporation, Hudson, Ohio.

2.27 Tire Repair Cost. It has been estimated that tire repairs are 15 percent of the total hourly tire wear cost. The LAF is used to adjust the tire repair cost to account for regional variations in labor and parts costs. This cost element has been calculated and listed separately in table 2-2. It is expressed as a formula, as follows:

$$\text{Tire Repair Cost} = \text{Total Hourly Tire Wear Cost x } 0.15 \text{ x LAF}$$

SECTION IX. STANDBY HOURLY RATE

2.28 Standby Hourly Rate. The standby rate is computed by allowing the full FCCM hourly cost (based on a 40-hour work week), plus one-half of the hourly depreciation. It is expressed as a formula, as follows:

$$\text{Standby Rate/hr} = (\text{DEPR/hr x } 0.50) + \text{FCCM/hr}$$

a. Paid standby must not exceed 40 hours per week (7 calendar days) (based on a 40-hour work week) per unit of equipment. Actual operating hours during a week will be credited against the 40 hours maximum standby allowance.

b. Standby costs will not be allowed during periods when the equipment would have otherwise been in idle status.

c. When the equipment is purchased used, standby will be computed on the basis that the equipment was purchased new by the contractor in the year it was actually manufactured. Refer to chapter 3 for rate adjustments.

SECTION X. RATE CALCULATION EXAMPLE

2.29 Computation Example. Figure 2-1 is an example of how the total hourly rates in table 2-1 are computed. A blank Equipment Rate Computation Worksheet is included in appendix A and can be copied, as needed.

a. When an hourly rate for a specific unit of equipment is not included in this pamphlet and a rate must be computed, the methodology contained in chapter 2 will be followed. However, when a unit of equipment is not included in this pamphlet and the necessary factors to compute a rate are not found in appendix D, please contact the Chief, Cost Engineering Branch, Engineering and Construction Division, Walla Walla District, U.S. Army Corps of Engineers, for assistance as explained in chapter 1. A Microsoft Excel® spreadsheet (CHECKRATE) is also available for rate computation (see chapter 1, paragraph 1.5, How to Obtain CHECKRATE).

b. See chapter 3 for further guidance on the procedure for rate adjustments.

Example: The piece of equipment shown is based on a known piece of equipment for illustration purposes only.

Use this worksheet to compute an hourly rate for equipment that is not in this pamphlet, or is in the pamphlet but not equivalent in size, capacity, horsepower, or value (see appendix A for a blank form).

1. EQUIPMENT INFORMATION AND EXPENSE FACTORS ID No: C80GV016

a.

(1)	Equipment Description	CRANES, HYDRAULIC, TRUCK MTD, ALL TERRAIN, 350 TON, 263' BOOM, 12X8

2. EQUIPMENT VALUE

a. List Price + Accessories (At year of Manufacture) = $ 3,114,977.43

(1) Discount (List Price {1.a (10)} + Accessories) x Discount Code {1.c (3)}

($ 3,114,977.43 + $ -) x 7.5% = $ (233,623.31)

(2) Subtotal {2.a} - {2.a (1)} Subtotal = $ 2,881,354.12

(3) Sales or Import Tax Subtotal {2.a (2)} x Tax Rate {appendix B}

$ 2,881,354.12 x 4.25% = $ 122,457.55

(4) Total Discounted Price: Subtotal 2.a (2) + 2.a (3) Subtotal = $ 3,003,811.67

b. Freight Shipping Weight {1.a (8)} x Freight Rate per cwt {appendix B}

1,843 cwt x $ 23.34 = $ 43,015.62

c. **TOTAL EQUIPMENT VALUE (TEV):** **TOTAL [2]** = **$ 3,046,827.29**

{2.a (4)} + {2.b} OR actual purchase price {1.a (10)}

(See chapter 3 for used and overage equipment rate adjustments.)

---

3. DEPRECIATION PERIOD (N)

a. LIFE {1.c (4)} / Working Hours Per Year (WHPY) = N {appendix B}

20,000 / 1520 = 13.16 years (N)

---

4. OWNERSHIP COST

a. Depreciation

(1) Tire Cost Index (TCI) (USE EK = 100 in appendix E)

Tire Index, Year of Manufacture {1.a (4)} / Tire Index, Year of Use {1.a (3)} = Tire Cost Index (TCI)

3811 / 3864 = 0.986

(2) [TEV {2.c} x (1 - SLV) {1.c (5)} - (TCI {4.a (1)} x Tire Cost) {1.a (9)(d)}] / Life {1.c (4)}

$ 3,046,827.29 x (1.0-0.15) - (0.986 x $28,440)] / 20,000 hrs = $128.09/hr

Figure 2-1. Equipment Rate Computation Worksheet

($128.09/hr	x	0.50)	+	$34.07/hr	=	**$98.12/hr**

(Refer to chapter 3, paragraph 3.12 for guidance for overage equipment.)

See chapter 3 if rate adjustments are necessary.

Figure 2-1. Equipment Rate Computation Worksheet
Page 6 of 6

Table 2-1
Hourly Equipment Ownership and Operating Expense

EXPLANATION OF TABLE HEADINGS

Example unit of equipment: Grove, Model GMK6300L.

CAT: C80 is the category number and identifies it as Cranes, Hydraulic, Truck Mounted (from appendix D).

ID No.: C80GV016 is the unique identification number for the above Grove crane. GV equals the manufacturer (see appendix H). 016 equals the numeric order of this unit of equipment within the manufacturer's listing.

MODEL: GMK6300L is the equipment model number.

EQUIPMENT DESCRIPTION: Specific information for each particular unit of equipment is described, such as "CRANES, HYDRUALIC, TRUCK MTD, ALL TERRAIN, 350 TON, 263' BOOM, 12X8" for the Grove crane.

ENGINE HORSEPOWER AND FUEL TYPE: The amount of horsepower and type of fuel used is stated for the main and carrier engines. The Grove crane carrier has a 551-horsepower engine, and the crane has a 286-horsepower engine. The carrier engine is on-road diesel and the crane engine is off-road diesel.

VALUE (TEV): This column reflects the predetermined "equipment cost" used to compute the rates and is based on equipment purchased new in 2015.

TOTAL HOURLY RATES ($/HR): All ownership and operating expenses for the average condition are included. All cost elements, including fuel, are totaled in the AVERAGE column. The STANDBY column includes the hourly allowance for equipment on legitimate standby status (see section 2.28 for more information).

ADJUSTABLE ELEMENTS: This column shows ownership elements and fuel costs used to develop the average total hourly rates so they can be adjusted as indicated in chapter 3. Operating costs may be determined by subtracting the ownership cost elements (DEPR plus FCCM) from the total hourly rate for the average condition.

CWT: The shipping weight of the equipment is stated in hundredweight.

Chapter 3
Adjustments to Hourly Rates

SECTION I. GENERAL

3.1 Contents. This chapter explains the procedures for adjusting the hourly rates shown in tables 2-1 and 2-2.

3.2 Basis for Equipment Rates. The rates shown in tables 2-1 and 2-2 are based on the catalog list price of equipment manufactured in 2015 (3 years old). Area factors used to compute regional ownership and operating expenses are listed in appendix B. All equipment hourly rate elements for average and severe conditions are given in table 2-2. Individual cost elements, which comprise the total hourly rate, are shown in table 2-2. These hourly rate elements are listed by equipment ID No., which corresponds to the equipment shown in table 2-1.

a. Ownership costs consist of two cost elements: Depreciation (DEPR), and facilities capital cost of money (FCCM). These elements are located in tables 2-1 and 2-2.

b. Operating costs consist of five cost elements: Fuel (FUEL); filters, oil, and grease (FOG); tire wear (TIRE WEAR); tire repair (TIRE REPAIR); and repairs (REPAIR). These elements are located in table 2-2.

3.3 Equipment Rate Adjustment Tables. Table 3-1 is used to adjust the ownership (DEPR + FCCM) portion of the average hourly rate and table 3-2 is used to adjust the standby hourly rate shown in table 2-1.

3.4 Determination for Use of Equipment Rates in Tables 2-1 and 2-2. The predetermined equipment rates in tables 2-1 and 2-2 may be used when the contractor's actual cost data (cost or pricing data) is insufficient to calculate the rates. If the contractor's actual equipment is listed in tables 2-1 and 2-2, the equipment must be similar. However, if the contractor's actual equipment is not listed in tables 2-1 and 2-2, a similar piece of equipment may be chosen from the tables. To be considered similar, the contractor's equipment must be no more or less than 10.00 percent of the configuration (size, capacity, and horsepower) and value as compared to the equipment in tables 2-1 and 2-2. In either case, if the equipment is not similar, the equipment rate must be calculated using the methodology in chapter 2.

SECTION II. RATE ADJUSTMENTS

3.5 Rate Adjustments. The ownership and/or the operating portion of the hourly rates and standby hourly rates must be adjusted whenever one or more of the following rate adjustment conditions exists (rate adjustments are explained in detail in the following paragraphs).

a. Changes in operating conditions.
b. Changes in cost of money rate (CMR).

c. Actual work hours (hrs) exceed 40 hrs per week (wk).
d. Changes in fuel cost (FUEL).
e. Adjustments to FOG cost.
f. Equipment of different age than table 2-1.
g. Rate adjustment for overage equipment.
h. Rate adjustment for overage equipment standby.

There are no rate adjustments for appendix B factors, except for fuel cost (electric, gas, diesel off-road, and diesel on-road) and the cost of money rate (CMR). Also, there are no rate adjustments for repairs, tire wear, or tire repair.

3.6 Changes in Operating Conditions. If difficult or severe conditions are justified by the contracting officer, selection or calculation of the appropriate rate is necessary. See chapter 2, section II, for definition of average, difficult, or severe conditions and determination of condition.

3.7 Change in Cost of Money Rate (CMR). The Department of the Treasury adjusts the CMR, also known as the Prompt Payment Interest Rate, on or about 1 January and 1 July each year; these revisions are printed in the Federal Register. The Internet address for Prompt Payment Interest Rate is https://www.fiscal.treasury.gov/fsservices/gov/pmt/promptPayment/rates.htm. If the CMR shown in chapter 2, section VII, is not the current rate, the FCCM portion of the total hourly rate must be adjusted upward or downward to match the CMR for the period of equipment use. See appendix I for a listing of historical CMRs. The total hourly rate adjusted for a differing CMR is computed by the formula:

$$\text{Total Hourly Rate} = \text{DEPR/hour} + \left[(\text{FCCM/hour}) \text{ x } \frac{(\text{NEW CMR})}{(\text{Old CMR})}\right] + \text{Operating Costs/hour}$$

Example: Assume that table 2-1 includes a crane (category (CAT) C80, subcategory (SUB) 0.01), with hourly costs as shown in the following example. The CMR has increased from 5.00 percent to a current rate of 6.00 percent (increase of 20.00 percent). The total hourly rate for this piece of equipment is determined as follows:

Assumptions for Total Hourly Rate with CMR of 5.00 percent (per hour):

DEPR	$30.00
FCCM	$10.00
Operating Costs (FUEL, FOG, TIRE WEAR, TIRE REPAIR, and REPAIR)	+$40.00
Total Hourly Rate (Based on a 40 hr/wk)	$80.00

Adjustment Calculation of Total Hourly Rate for New CMR of 6.00 percent (per hour):

$$\$30.00/\text{hr} + \$10/\text{hr} \text{ x } \frac{6.00\%}{5.00\%} + \$40.00/\text{hr} = \$82.00/\text{hr}$$

3.8 Actual Work Hours Greater than 40 Hours per Week. If the actual number of work hours per week is greater than 40 hours, an adjustment must be made to the FCCM element of the ownership cost. The FCCM is to be paid up to a maximum of 40 hours per week (7 calendar days). To calculate a multi-shift rate, prorate the 40-hour FCCM over the actual hours per week as follows:

Example: Assume that table 2-1 includes a crane (category C80, subcategory 0.01) with the below hourly costs. This crane worked 10 hours per day, 6 days per week (60 hours per week). The total hourly rate for this piece of equipment is determined as follows:

$$\text{Total Hourly Rate} = \text{DEPR/hr} + (\text{FCCM/hr}) \text{ x } \frac{\text{40 hr/wk}}{\text{Actual Work hr/wk}} + \text{Operating Costs/hr}$$

Assumptions for Total Hourly Rate for 40 Hours/Week:

DEPR	$30.00
FCCM	$10.00
Operating Costs (FUEL, FOG, TIRE WEAR, TIRE REPAIR, and REPAIR)	+$40.00
Total Hourly Rate (Based on a 40 hr/wk)	$80.00

Adjustment Calculation of Total Hourly Rate for 60 Hours/Week:

$$\$30.00/\text{hr} + \$10.00/\text{hr x } \frac{40 \text{ hr/wk}}{60 \text{ hr/wk}} + \$40.00/\text{hr} = \$76.67/\text{hr}$$

3.9 Changes in Fuel Cost. Hourly fuel costs (including electricity) must be adjusted in the event that the average fuel prices at the jobsite vary by more than 10.00 percent above or below the price in appendix B. The contractor will be required to furnish copies of all fuel supply contracts and invoices to the government to support fuel cost adjustment. Request for upward adjustment in the rates will be considered only when fuel is supplied by recognized distributors of bulk quantities. Mathematically, this is the ratio of the new fuel cost divided by the fuel cost (appendix B). To calculate the total hourly rate, apply the ratio of fuel cost as follows.

Example: Assume that table 2-1 includes a crane (category C80, subcategory 0.01) with the below hourly costs. Assume the fuel cost (diesel off-road) in appendix B is $2.35/gal and the current fuel cost has increased to $2.82/gal (increase of 20.00 percent). The total hourly rate for this piece of equipment can be determined as follows:

Assumptions for Fuel Cost (based on $2.35/gal from appendix B) per hour:

$$\text{Total Hourly Rate} = \text{DEPR/hr} + \text{FCCM/hr} + \text{FOG/hr} + \text{Tire Wear/hr} + \text{Tire Repair/hr} + \text{Repair/hr} + \frac{\text{(New Fuel Cost)}}{\text{(Fuel Cost in Appendix B)}} \text{ x FUEL/hr}$$

DEPR	$30.00

FCCM	$10.00
FOG, TIRE WEAR, TIRE REPAIR, and REPAIR	$30.00
FUEL	+$10.00
Total Hourly Rate	$80.00

Adjustment Calculation for hourly FUEL cost using the new fuel cost of $2.82/gal:

$$\$30.00/\text{hr} + \$10.00/\text{hr} + \$30.00/\text{hr} + \frac{\$2.82/\text{gal}}{\$2.35/\text{gal}} \text{ x } \$10.00/\text{hr} = \$82.00/\text{hr}$$

3.10 Adjustments to Filters, Oil, and Grease (FOG) Cost. The hourly FOG allowance must also be adjusted upward or downward by applying the same ratio (new fuel cost divided by fuel cost shown in appendix B) as the changes in fuel cost, using the methodology as shown in paragraph 3.9.

3.11 Equipment of Different Age than Table 2-1. When the age of the equipment is newer or older than the age of the equipment listed in table 2-1, table 3-1 factors may be used to adjust the hourly rate (see paragraph 3.12 for guidance on overage equipment), otherwise the step-by-step calculation method (as shown in figure 2-1) is necessary. To adjust the hourly rate using the tables, the factors given in table 3-1 are multiplied by the hourly ownership costs shown in table 2-1. The result is an ownership rate adjusted for the actual age of the equipment. Note: Age adjustment factors in tables 3-1 and 3-2 vary by region.

a. When the age of a unit of equipment is older than the age of the equipment listed in table 2-1 (purchased new in 2015) and does not exceed the years of economic life, adjust the hourly rate as shown in the next example. The years of economic life is determined by dividing hours of LIFE (from appendix D) by Working Hours Per Year (WHPY) (from appendix B).

Example: Assume that table 2-1 includes a crane (category C80, subcategory 0.01) manufactured in 2015 and has a total hourly rate of $65 per hour and an ownership rate of $30 per hour. If a similar crane owned by a contractor was manufactured in 2012, the total hourly rate is determined as follows:

Table 2-1 Rate and Adjustment Calculation:

Total hourly rate	$65.00/hr
Ownership rate 2015 (DEPR + FCCM)	-($30.00)/hr
Ownership rate 2012 adjusted for age (Ownership rate = $30) x (0.95 the age adjustment factor from table 3-1, for category C80, subcategory 0.01, and for the year 2012.)	+$28.50/hr
Total hourly rate for equipment manufactured in 2012	= $63.50/hr

b. When the unit of equipment is older than the age of equipment listed in table 2-1 (purchased new in 2015) and exceeds the years of economic life, adjust the hourly rate as shown in the example for overage equipment in paragraph 3.12.

c. When the unit of equipment is newer than the equipment listed in table 2-1 (purchased new in 2015), use the adjustment factor in table 3-1 for the year of manufacture. If the equipment is newer than the most recent year shown in table 3-1, use the adjustment factor in the column of the most recent year. Once the adjustment factor is determined from table 3-1, complete the adjustment calculation as shown in the example above. The step-by-step calculation method shown in figure 2-1 may also be used.

3.12 Rate Adjustment for Overage Equipment. If the contractor's equipment exceeds the economic life in hours (from appendix D), it is considered overage, and the rates must be adjusted.

a. The total hourly operating rate for overage equipment (no matter how old) will be computed on the basis that the equipment is as old as possible without exceeding the hours of LIFE as shown in appendix D. Tables 3-1 and 3-2 show factors for the economic life for equipment based on the current pamphlet year (*e.g.*, manufactured in 2015). Select a comparable unit of equipment (horsepower, value, capacity, and size) shown in table 2-1; the total hourly rate can be computed as shown in the following example. If there is no comparable unit of equipment in table 2-1, follow the methodology presented in figure 3-1.

b. The ownership portion of the rate must be adjusted for equipment that is overage. This adjusted rate is not to exceed the rate for the same unit of equipment that is not overage.

Example: Assume that table 2-1 includes a crane (category C80, subcategory 0.01) manufactured in 2015, has a total hourly rate of $65 per hour, and an ownership rate of $30 per hour. If an equivalent crane owned by a contractor was manufactured in 2005 (maximum life 2008), this crane is overage and the total hourly rate is determined as follows:

Table 2-1 Rate and Adjustment Calculation:

Total hourly rate	$65.00/hr
Ownership rate 2015 (DEPR + FCCM)	-($30.00)/hr
Ownership rate 2005 adjusted for age (Ownership rate = $30.00) x (0.91 the oldest age adjustment factor from table 3-1, for category C80, subcategory 0.01, the last year shown.)	+$27.30/hr
Total hourly rate for equipment manufactured in 2001	= $62.30/hr

3.13 Standby Rate Adjustment for Equipment of a Different Age than Table 2-1. If the equipment age is other than listed in table 2-1 (purchased new in 2015), adjustment to the hourly standby rate is required. When the age of the equipment is newer or older

than the age of the equipment listed in table 2-1, table 3-2 factors may be used to adjust the hourly rate, otherwise the step-by-step calculation method is necessary. The result is a standby rate adjusted for the actual age of the equipment.

a. Standby rates for overage equipment are based on the actual age of the equipment. The age adjustment factor given in table 3-2 is multiplied by the hourly standby cost shown in table 2-1 for the listed or comparable unit of equipment. This results in a standby rate adjusted for the actual age of the unit of equipment being considered.

Hourly Standby Rate Adjusted for Actual Age =
Hourly Standby Rate x Age Adjustment Factor

Example: Assume that table 2-1 includes a crane (category C80, subcategory 0.01) manufactured in 2015 and has a standby rate of $20.00 per hour. If an equivalent crane owned by a contractor was manufactured in 2007, the hourly standby rate is determined as follows:

Hourly Standby Rate (table 2-1)	$20.00/hr
Age Adjustment Factor (table 3-2) for category C80, subcategory 0.01, and for 2007 (actual year of manufacture)	0.87

Adjustment Calculation:

Hourly Standby Rate Adjusted for Actual Age	$20.00/hr
(Hourly Standby Rate) x 0.87 (Age Adjustment Factor)	=$17.60/hr

b. When the unit of equipment is newer than the equipment listed in table 2-1 (purchased new in 2015), use the adjustment factor in table 3-2 for the year of manufacture. Once the adjustment factor is determined from table 3-2, complete the adjustment calculation as shown in the example above. The step-by-step calculation method shown in figure 3-2 may also be used.

c. When the equipment age is older than the last year shown in table 3-2, or newer than the first year shown in table 3-2, the standby rate must be calculated using the step-by-step methodology shown in figure 3-2.

3.14 Equipment Purchased Used. A detailed methodology for computing a total hourly rate for equipment purchased used is not included in this pamphlet.

a. When actual cost data consistent with chapter 1 is not available, an hourly rate and standby rate for equipment purchased used can be computed on the basis that the equipment was purchased new by the contractor in the year it was manufactured. Consideration for the actual age of used equipment may require an adjustment for overage.

b. The condition of the used equipment at the time of purchase should consider the extent of capital improvements, mechanical condition, and previous hours of operation. These conditions are difficult or impossible to determine and evaluate when computing a total hourly rate based on actual acquisition cost.

3.15 Rate Calculation Examples. Figure 3-1 illustrates how total hourly rates are adjusted for overage equipment. Figure 3-2 gives a sample calculation for computing adjusted standby rates.

Table 3-1
Equipment Age Adjustment Factors for Ownership Costs

The factors in this table are used when the age of a unit of equipment is other than the age of the equipment listed in table 2-1 (purchased new in 2015).

The factors are multiplied by the hourly ownership costs (shown in table 2-1) and result in an ownership rate adjusted for the actual age of the equipment being considered.

When the actual “life” in hours of the unit of equipment has exceeded the economic life given in appendix D, the age will be determined as discussed in chapter 3.

Refer to chapter 3 as follows:

3.11. Equipment of Different Age than table 2-1

3.12. Rate Adjustment for Overage Equipment

TOTAL HOURLY OPERATING RATE CALCULATION FOR OVERAGE EQUIPMENT

EXAMPLE

Assume the following set of given information for the rate calculation example:

1. The unit of equipment is not listed in table 2-1.

2. The equipment is contractor owned.

3. Data for the unit in question:

   a. Caterpillar front-end wheel loader
   b. Model 950-G, 4WD, 3.5 CY capacity
   c. Serial number indicates year of manufacture = 2004
   d. Actual purchase price in 2004 = $222,151
      (Includes all regional discounts, sales tax, and freight.)
   e. Horsepower is 180 hp. Fuel is Diesel Off-Road.
   f. Drive Tire (DT) size = 23.50 x 25, 16 ply, L-3 (appendix F, tire code ANNB5)
      DT cost (2018) = 4 tires x $3,752.00/tire = $ 15,008.00
   g. Weight = 39,200 lbs

4. Table 3-1, Age Adjustment Factors for Ownership Costs:

   a. Category = L40 Subcategory = 0.11
   b. The year corresponding to the last age adjustment factor = 2012.

5. Adjust the actual purchase price:

   a. Economic Indices from appendix E (wheel loaders EK = 45)
      (1) For 2012 (first year of economic life), the economic index 7464
      (2) For 2004 (year of manufacture, the economic index is = 5857

   b. Purchase price (total equipment value (TEV) indexed to 2012 (first year of economic life)): (Purchase price includes discount, sales tax, and freight for this region).

      (7,464 / 5,857) x $ 222,151.00 = **$ 283,103.14** (= 2012 purchase price)

6. Hourly rate is computed as follows, consistent with figure 2-1, Equipment Rate Computation Worksheet.

Figure 3-1. Total Hourly Operating Rate Calculation for Overage Equipment

Example: The piece of equipment shown is based on a known piece of equipment for illustration purposes only.

Use this worksheet to compute an hourly rate for equipment that is not in this pamphlet, or is in the pamphlet but not equivalent in size, capacity, horsepower, or value (see appendix A for a blank form).

REGION 10

1. EQUIPMENT INFORMATION AND EXPENSE FACTORS ID No: _____

a.

(1)	Equipment Description	LOADERS, FRONT END, WHEEL TYPE - ARTICULATED, 0 THRU 225 HP
(2)	Model and Series	Caterpillar Model 950G
(3)	Present Year or Year of Use	2018
(4)	Year Manufactured	2004 indexed to 2012
(5)	Horsepower - Equipment	180 hp
(6)	Horsepower - Carrier	0 hp
(7)	Fuel - Equipment	Diesel Off-Road
	Fuel - Carrier	None
(8)	Shipping Weight (cwt)	392 cwt

(9) Tire size and number of tires: (Cost of tires based on present year; see 1.a (3) and app. F):

	Size/Ply	App F Code	No.	Unit Price	Cost
(a) Front (FT)					$ -
(b) Drive (DT)	23.50 x 25	ANNB5	4	$ 3,752.00	$ 15,008.00
(c) Trailing (TT)					$ -
(d) **Total Tire Cost**					**$ 15,008.00**

(10) List Price + Accessories

[at Year of Manufacture] $ - OR Actual Purchase Price: $ 283,103.14

5. OPERATING COST (Continued)

e. Tire Wear Cost (Use current price levels. See appendix F.)

(1) Front Tires (FT)

(1.5 x FT Cost)	/	(1.8 x FT Wear Factor	x	Maximum Tire Life Hours)		
{1.a (9)(a)}		{1.c (9)(a)}		{appendix F}		
(1.5 x $0)	/	(1.8 x 0.88	x	3,000 hr)	=	$0.00/hr

(2) Drive Tires (DT)

(1.5 x DT Cost)	/	(1.8 x DT Wear Factor	x	Maximum Tire Life Hours)		
{1.a (9)(b)}		{1.c (9)(b)}		{appendix F}		
(1.5 x $15,008)	/	(1.8 x 0.58	x	3,000 hr)	=	$7.19/hr

(3) Trailing Tires (TT)

(1.5 x TT Cost)	/	(1.8 x TT Wear Factor	x	Maximum Tire Life Hours)		
{1.a (9)(c)}		{1.c (9)(c)}		{appendix F}		
(1.5 x $0)	/	(1.8 x 0.98	x	0 hr)	=	$0.00/hr

(4) Total Tire Wear Cost **Total [5.e] = $7.19/hr**

f. Tire Repair Cost

Total Tire Wear Cost/Hour	x	(0.15 x LAF)	
{5.e (4)}		{appendix B}	
$7.19/hr	x	(0.15 x 1.21)	**Total [5.f] = $1.30/hr**

g. TOTAL HOURLY OPERATING COST

Sum {5.a} through {5.f} **Total [5] = $56.28/hr**

Figure 3-1. Total Hourly Operating Rate Calculation for Overage Equipment
Page 5 of 6

REGION 10

a. Total Hourly Rate: (Based on 40 hours per week).

Ownership Cost	+	Operating Cost		
{4.c}		{5.g}		
$24.83/hr	+	$56.28/hr	=	**$81.11/hr**

---

b. Other Work Shifts Hourly Rate:

(Refer to chapter 3, Adjustments to Rates, for methodology.)

Depreciation	+	(FCCM	x	40 hr/wk	/	Work hr/wk)	+	Operating Cost		
{4.a (2)}		{4.b (2)}						{5.g}		
$21.25/hr	+	($3.58/hr	x	40 hr/wk	/	60 hr/wk)	+	$56.28/hr	=	**$79.92/hr**
				(Example: 60 hr/wk)						

---

c. Standby Hourly Rate:

(Refer to chapter 2, paragraph 2.28 for guidance on use.)

(Depreciation	x	0.50)	+	FCCM		
{4.a (2)}				{4.b (2)}		
($0.00/hr	x	0.50)	+	$0.00/hr	=	**$0.00/hr**

(Refer to chapter 3, paragraph 3.12 for guidance for overage equipment.)

See chapter 3 if rate adjustments are necessary.

Figure 3-1. Total Hourly Operating Rate Calculation for Overage Equipment
Page 6 of 6

Table 3-2
Equipment Age Adjustment Factors for Standby Costs

The factors in this table are used when the age of a unit of equipment is other than the age of the equipment listed in table 2-1.

These factors are multiplied by the hourly standby costs shown in table 2-1 and result in a standby rate adjusted for the actual age of the equipment being considered.

When the actual “life” in hours of the unit of equipment has exceeded the economic life given in appendix D, the age will be determined as discussed in chapter 3.

Refer to chapter 3 as follows:

3.13. Rate Adjustments Overage Equipment Standby

Table 3-2
Equipment Age Adjustment Factors for Standby Cost

STANDBY HOURLY STANDBY RATE CALCULATION FOR OVERAGE EQUIPMENT

EXAMPLE

Assume the following set of given information for the rate calculation example:

1. The unit of equipment is not listed in table 2-1.

2. The equipment is contractor owned.

3. Data for the unit in question:

    a. Caterpillar front-end wheel loader
    b. Model 950-G, 4WD, 3.5 CY capacity
    c. Serial number indicates year of manufacture = 2004
    d. Actual purchase price in 2004 = $ 222,151.00
    (Includes all regional discounts, sales tax, and freight)
    e. Horsepower is 180 hp. Fuel is Diesel Off-Road.
    f. Drive tire (DT) size = 23.50 x 25, 16 ply, L-3 (appendix F, tire code ANNB5)
    DT cost (2018) = 4 tires x $3,752.00/tire = $ 15,008.00
    g. Weight = 39,200 lbs

4. Use the actual cost data as follows:

    a. Purchase price (TEV) = $ 222,151.00
    b. Year of manufacture = 2004

5. The standby rate is computed on the following pages.

Figure 3-2. Total Hourly Standby Rate Calculation for Overage Equipment

Example: The piece of equipment shown is based on a known piece of equipment for illustration purposes only.

Use this worksheet to compute an hourly rate for equipment that is not in this pamphlet, or is in the pamphlet but not equivalent in size, capacity, horsepower, or value (see appendix A for a blank form).

REGION 10

1. EQUIPMENT INFORMATION AND EXPENSE FACTORS ID No: _____

a.

(1) Equipment Description:	LOADERS, FRONT END, WHEEL TYPE - ARTICULATED, 0 THRU 225 HP
(2) Model and Series:	Caterpillar Model 950G
(3) Present Year or Year of Use	2018
(4) Year Manufactured	2004
(5) Horsepower - Equipment	180 hp
(6) Horsepower - Carrier	0 hp
(7) Fuel - Equipment	Diesel Off-Road
Fuel - Carrier	None
(8) Shipping Weight (cwt)	392 cwt

(9) Tire size and number of tires: (Cost of tires based on present year; see 1.a (3) and app. F):

	Size/Ply	App F Code	No.	Unit Price	Cost
(a) Front (FT)					$ -
(b) Drive (DT)	23.50 x 25	ANNB5	4	$ 3,752.00	$ 15,008.00
(c) Trailing (TT)					$ -
(d) **Total Tire Cost**					**$ 15,008.00**

(10) List Price + Accessories

[at Year of Manufacture] $ - OR Actual Purchase Price: $ 222,151.00

USE APPENDIX D TO OBTAIN THE FOLLOWING DATA

b. Category and Subcategory	L40	0.11
c. Hourly Expense Calculation Factors		
(1) Economic Key (EK)		45
(2) Operating Condition (C): A = Average, D = Difficult, S = Severe	A -	AVERAGE
(3) Discount Code (DC): B = 7.5%, S = 15%	B -	7.5%
(4) Life in Hours		9,250
(5) Salvage Value Percentage		25%
(6) Fuel Factor - Equipment		0.031
(7) Fuel Factor - Carrier		0.000
(8) Filter, Oil, and Grease (FOG)		0.111
(9) Tire Wear Factor		
(a) Front (FT)		0.88
(b) Drive (DT)		0.58
(c) Trailing (TT)		0.98
(10) Repair Cost Factor (RCF)		0.70

Figure 3-2. Total Hourly Standby Rate Calculation for Overage Equipment
Page 1 of 6

REGION 10

2. EQUIPMENT VALUE

a. List Price + Accessories (at year of manufacture.) = $ -

(1) Discount (List Price + Accessories) x Discount Code

{1.a (10)} {1.c (3)}

($ - + $ -) x 7.5% = $ -

(2) Subtotal {2.a} - {2.a (1)} Subtotal = $ -

(3) Sales or Import Tax Subtotal x Tax Rate

{2.a (2)} {appendix B}

$ - x 4.25% = $ -

(4) Total Discounted Price: Subtotal 2.a (2) + 2.a (3) Subtotal = $ -

b. Freight Shipping Weight x Freight Rate per cwt

{1.a (8)} {appendix B}

392 cwt x $ 45.19 = $ -

c. **TOTAL EQUIPMENT VALUE (TEV):** **TOTAL [2]** = **$ 222,151.00**

{2.a (4)} + {2.b} OR actual purchase price {1.a (10)}

(See chapter 3 for used and overage equipment rate adjustments.)

---

3. DEPRECIATION PERIOD (N)

a. LIFE / Working Hours Per Year (WHPY) = N

{1.c (4)} {appendix B}

9,250 / 1520 = 6.09 years (N)

---

4. OWNERSHIP COST

a. Depreciation

(1) Tire Cost Index (TCI) (USE EK = 100 in appendix E)

Tire Index, Year of Manufacture / Tire Index, Year of Use = Tire Cost Index (TCI)

{1.a (4)} {1.a (3)}

2614 / 3864 = 0.677

(2) [TEV x (1 - SLV) - (TCI x Tire Cost)] / Life

{2.c} {1.c (5)} {4.a (1)} {1.a (9)(d)} {1.c (4)}

$ 222,151.00 x (1.0-0.25) - (0.677 x $15,008)] / 9,250 hrs = $16.91/hr

Figure 3-2. Total Hourly Standby Rate Calculation for Overage Equipment
Page 2 of 6

REGION 10

4. OWNERSHIP COST (Continued)

b. Facilities Capital Cost of Money (FCCM)

(1)	[(N - 1.0)	x	(1 + SLV)	+	2.0]	/	(2.0 x N)	=	Average Value Factor		
	{3.a}		{1.c.5}				{3.a}		(AVF)		
	[(6.09 yr - 1.0)	x	(1.0 + 0.25)	+	2.0]	/	(2.0 x 6.09 yr)	=	0.687		

					Adjusted

LEFT BLANK INTENTIONALLY

Chapter 4
Methodology for Dredging Plant and Marine Equipment

SECTION I. GENERAL

4.1 Contents. This chapter contains the methodology used to compute ownership and operating rates for dredging plant and permanent floating plant, such as floating pile-driving equipment. Dredging plant is marine equipment used for dredging operations for the majority of its life, or designed and built for marine/dredging use.

4.2 General.

a. The ownership and operating rates provided in table 2-1, category M-10, are based on the methodology in chapter 2 for non-dredging equipment. However, the cost data (Acquisition Cost, Horsepower, and Fuel Type) may be used for calculation of dredging plant and marine equipment rates, provided they are calculated consistent with the methodology in this chapter.

b. Table 4-1 shows ownership and operating cost factors for various types of dredging plant. When a type of plant is not listed, the cost is estimated by using the factors listed in this table for a similar type of plant.

c. The methodology for determining operating rates for hopper dredges was omitted from this pamphlet due to the limited number of hopper dredges and the complexity of the methods used to calculate the rates. Further information can be found in Engineer Regulation (ER) 1110-2-1302, Engineering and Design, Civil Works Cost Engineering, and in Engineer Technical Letter (ETL) 1110-2-573 Engineering and Design: Construction Cost Estimating Guide for Civil Works. These documents can be viewed or downloaded at the official HQUSACE documents web page at http://www.usace.army.mil/ by selecting “Library” and selecting “Publications.” Select “USACE Publications” in the title bar. A dropdown menu will appear. From the dropdown menu, select “Engineer Regulations,” or “Engineer Technical Letters.” The methodology for calculating ownership cost is in section V of this chapter.

d. For mechanical dredges, the cost of the bucket is typically included in the plant value; therefore, no additional allowance should be made for ownership cost. If the bucket cost is not included in the plant value, the bucket may be treated as a separate unit of equipment.

SECTION II. ANNUAL USE

4.3 Time Available to Dredge. The number of months available per calendar year (yr) for dredging will be based on the work time available to dredge, excluding downtime for major repairs, work in dry dock, bad weather, and environmental restrictions. Figure 4-1 depicts months available for dredging, including mobilization and demobilization, based on historic data collected by the U.S. Army Corps of Engineers’ regional dredge

estimating teams. The data in figure 4-1 will be used for computing the ownership costs, unless specified otherwise in the contract documents.

AVAILABLE TIME TO DREDGE BY REGION
(In Months)

Region	Type of Dredging Operation		
	Pipeline	Bucket	Hopper
Atlantic Coast and tributaries	9	10	10
Gulf Coast, Lower Mississippi, and Tributaries	10	10	11
Great Lakes, Upper Mississippi, and Tributaries	8	8	8
West Coast and Tributaries	9	9	9

Figure 4-1. Months Available by Region

SECTION III. LIFE

4.4 Life. The life for determining ownership and operating costs is defined as follows:

a. The Useful Life is expressed in years in table 4-1. It is the economic life of the equipment and is used to develop ownership rates for various types of dredging plant.

b. The Physical Life is expressed in hours (hrs) in table 4-1. It is the life of the unit based on effective working time and is used to develop operating rates for various types of dredging plant.

4.5 Annual Hours Available. The annual hours available to dredge can be established for each type of plant based on the months available and the estimated effective monthly hours worked. Dredging time is defined as effective plus non-effective working time. “Effective working time” is defined as time during the dredging operation when actual production is taking place. “Non-effective working time” is defined as time during the dredging operation when the dredge is operational but no production is taking place. For further information see ER 1110-2-1302, Engineering and Design, Civil Works Cost Engineering. The total annual hours available can be expressed by formula, as follows:

Available Hours per yr = Months Available/yr x Effective Hours/Month

Where:

a. Months Available/yr is found in figure 4-1.

b. Effective Hours/Month is the effective working time.

SECTION IV. SALVAGE VALUE

4.6 Salvage Value (SLV). The salvage value, expressed as a decimal, is shown in table 4-1 for different types of plant.

SECTION V. OWNERSHIP COST

4.7 Ownership Cost. Ownership cost is calculated based on a percent of plant value. Plant value is the acquisition cost plus the cost of any initial capital improvements. The value of initial capital improvements is based on those betterments, which were made within one year of purchase. Capital improvements do not include any replacement or repair work. Repairs or replacements are an operating cost and are covered in the repair cost allowance. Capital improvements are considered betterments, where the plant has been improved (*e.g.,* adding radar or upgrading engines). (Note: Only the cost difference between replacement of existing similar engines and actual cost for upgrading engines should be considered as capital improvement). For capital improvements not made within the first year after the initial acquisition, see section VIII.

a. The ownership cost is determined from the plant value and is the total expense rate based on depreciation and CMR. When cost or pricing data is available, the actual acquisition price will be used. Otherwise, the value of a similar piece of plant is used and, if necessary, adjusted so that capacity, size, and horsepower are properly considered.

b. Ownership rate is determined on a yearly basis and is distributed over a monthly basis. The monthly rate is calculated based on the available use months by using the following formula:

$$\text{Monthly Ownership Cost} = \frac{\text{Plant Value x (Yearly DEPR Percent} + \text{Yearly CMR Percent)}}{\text{Available Use Months}}$$

Where:

(1) Plant Value = Acquisition price plus initial capital improvements.

(2) Yearly DEPR Percent = Ownership percent per year for depreciation.

(3) Yearly CMR Percent = Ownership percent per year for cost of money rate.

(4) Available Use Months is from figure 4-1.

4.8 Depreciation Factor. Depreciation is computed using the straight-line method. The depreciable value is the acquisition cost, plus initial capital improvements, less estimated salvage. The basis for determining the yearly percentage factor for depreciation is expressed by the following formula:

$$\text{Yearly DEPR Percent} = (1 - \text{SLV}) / \text{N}$$

Where:

a. N = Useful Life from table 4-1.

b. SLV = Salvage Value from table 4-1.

4.9 The Cost of Money Rate (CMR) Factor. The CMR factor is calculated on a yearly basis and is expressed here as an annual percentage factor. The CMR used in the calculation is the rate in effect at the time the work was performed. This formula is expressed as follows:

$$\text{Yearly CMR Percent} = \frac{[(\text{N} - 1)(1 + \text{SLV}) + 2](\text{discounted CMR})}{2\text{N}}$$

Where:

a. N = Useful Life from table 4-1.

b. SLV = Salvage Value from table 4-1.

c. Discounted CMR = cost of money rate (appendix I) reduced by 25 percent for overhead and profit allowance.

4.10 Other Ownership Elements. Taxes, storage (lay up), and insurance are considered indirect (overhead) costs. These costs are not included in ownership rates since they vary by geographic area and with individual contractors. These costs are

considered as overhead costs and are, therefore, not included here so they will not be duplicated in the overhead in the estimate or submitted proposal.

SECTION VI. OPERATING FACTORS

4.11 Hourly Operating Cost. Operating cost is based on effective working time. Dredging plant operating factors are shown in table 4-1. These factors, which are described in paragraph 4.12, are not intended to replace historical data, but will be used when historical data is limited or nonexistent.

4.12 Prime and Secondary Power. Prime power refers to the primary operating engine for the dredge or other piece of attendant plant. Secondary power refers to all other secondary engines or power plants. If more than one secondary power engine is present, the horsepower is totaled. Fuel consumption factors are prepared on the same basis as in chapter 2. Hourly fuel cost is calculated separately for the primary and secondary engines. The formula used is expressed as follows:

Hourly Fuel Cost = Horsepower x Fuel Cost/Gallon x Engine Fuel Factor

Where:

a. Horsepower is the engine's rated horsepower.

b. Fuel Cost/Gallon is based on values shown in appendix B. See chapter 3 for fuel cost adjustments.

c. Fuel Factor - Gas or Diesel Fuel. The fuel factor is listed in table 4-1 for the primary and secondary engines.

4.13 Water, Lube, and Supplies (WLS). This factor is similar to the filters, oil, and grease (FOG) factor described in chapter 2. This item is computed as either a percentage of the hourly fuel costs or, if the type of plant has no engine, a reasonable hourly cost should be included. This factor does not include an allowance for the oiler normally assigned to the dredge or other piece of dredging plant. The formula is expressed as follows:

Water, Lube, and Supply Cost = WLS factor x Hourly Fuel Cost

Where:

a. WLS Factor is obtained from table 4-1.

b. Hourly Fuel Cost is calculated as shown in paragraph 4-12.

4.14 Repair Factor (RPR). This factor includes an allowance for all major and minor repairs and is similar to the maintenance and repair cost factor (RCF) described in

chapter 2. The economic adjustment factor (EAF) and the labor adjustment factor (LAF) are required to develop this cost. The formula is expressed as follows:

$$\text{Repair Cost} = \frac{(\text{Total Plant Value x RPR x EAF x LAF})}{\text{Life in hr}}$$

Where:

a. Total Plant Value = Acquisition price plus initial capital improvements.

b. RPR = Repair Factor from table 4-1.

c. EAF = Economic Index (present year)/Economic Index (acquisition year).

d. LAF = Labor Adjustment Factor from appendix B.

e. Life in hrs = Physical Life from table 4-1.

It should be noted that the repair allowance does not include the following estimated additive items:

f. Excessive dredge wear for parts (e.g., cutter teeth and main suction pumps) is not included due to the wide variety of materials being dredged. The original cost of the bucket and normal wear are typically included in the plant value covered in the plant rate. Excessive bucket wear for mechanical dredges is estimated as an additive item or treated as a separate unit of equipment from table 2-1. Allowances for wear due to abrasive material should only be included as an additive item if it is warranted and is not considered elsewhere in the estimate.

g. Dry docking costs, which represent an allowance for rental of the dry dock facility, are not included because they vary greatly depending on the facilities available. Repairs incurred while in dry dock, which occur periodically, are in the repairs. Dry docking costs will be allocated on an average annual basis over the years between such occurrences, consistent with cost accounting standards and generally accepted accounting principles and practices.

h. There is no predetermined allowance in the dredging plant methodology for jobsite yard costs, mobilization, or demobilization. All of these cost elements must be separately estimated to match each project's construction conditions.

SECTION VII. STANDBY

4.15 Standby Rate. The standby rate is computed by allowing the full ownership cost. In addition to the standby ownership rate, it may be necessary on dredges to include operating costs. Examples of allowable operating costs are as follows: Minimum crew;

a generator fuel allowance to account for operation of a diesel engine generator for power to operate pumps; navigation lights; etc.

a. Standby is a directed delay by the Government and will not be allowed during periods when the plant would have otherwise been in idle status, such as non-effective working time. Since ownership is calculated based on life in years computed monthly, standby should be paid only when additional time has been directed by the Government. Standby is to be paid on a 24-hour basis.

b. Standby for pipeline and accessories will be based on pumping mud in determining values from table 4-1.

SECTION VIII. NEGOTIATED PROCUREMENT

4.16 Rates. The calculated dredging plant rates based on the methodology presented in this chapter should be used for preparing a reasonable contract estimate. When adequate cost or pricing data is available and submitted by the contractor for negotiated procurement, the rates may be adjusted consistent with the methodology in this chapter. Cost or pricing data is defined in FAR 15.4, Contract Pricing.

4.17 Allowance for Additional Capital Improvements. Allowance for additional capital improvements will be calculated consistent with generally accepted accounting principles. When adequate cost or pricing data is not available, factors for a similar unit of equipment may be used for determining the ownership rate for overage equipment and plant.

4.18 Overage Plant. When the plant has exceeded the useful life given in table 4-1, it is considered overage. The ownership rate for overage plant should be determined with the same methodology described in section V.

a. When actual cost or pricing data is available to adjust the operating rate, the data must be accurate, complete, and established according to generally accepted accounting principles.

b. When actual cost or pricing data is not available, the total hourly operating rate for overage equipment will be computed on the basis that the equipment is equal to the useful life as shown in table 4-1.

4.19 Dredging and Marine Plant Purchased Used. For plant purchased used, the ownership and operating rate must be calculated on an individual case, due to the varying conditions. When actual cost or pricing data is not available, the methodology from this chapter will be used and values for life and salvage from table 4-1 can be adjusted. Support for adjustments can be obtained by calling the Chief, Cost Engineering Branch, Engineering and Construction Division, Walla Walla District, U.S. Army Corps of Engineers, CENWW-ECE, telephone 509-527-7511 or 509-527-7510.

SECTION IX. RATE CALCULATION EXAMPLE

4.20 Rate Calculation Example. The example shown in figure 4-2 illustrates the use of figure 4-1, table 4-1, and the regional data from appendix B to generate a rate. For illustration purposes, assume that a 24-inch hydraulic dredge (pipeline) was purchased new in 1997 for $4,500,000, including tax and delivery, and there were no initial capital improvements. This example uses 500 hours per month and a discounted CMR of 2.80 percent.

Table 4-1
Dredging Plant Cost Factors

Type of Plant	Useful Life	Physical Life	Salvage Value	Prime Engine Fuel Factor			Secondary Engine Fuel Factor			WLS %		RPR %

REGION 10

1. MARINE AND DREDGING PLANT INFORMATION AND EXPENSE FACTORS (Continued)

d. Figure 4-1, Available Time to Dredge By Region Data (See paragraph 4.3 for guidance)

(1) Months Available per Year (9 months is used for this example)	9 months/yr

e. Table 4-1, Dredging Plant Cost Factors Data

(1) Useful Life (in years) for Ownership (N)	25 yrs
(2) Physical Life (in hours) for Repairs	130,000 hrs
(3) SLV (Salvage Value Factor)	0.10
(4) Prime Engine Fuel Factor (gal/bhp-hr)	0.045
(5) Secondary Engine Fuel Factor (gal/bhp-hr)	0.039
(6) WLS (Water, Lube, and Supplies Factor) percent	22%
(7) RPR (Repair Cost Factor)	1.30

2. ANNUAL OWNERSHIP PERCENTAGE FACTORS

a. Depreciation Percent per Year (DEPR)

(1.0 - SLV)	/	N		
{1.e (3)}		{1.e (1)}		
(1.0 - 0.10)	/	25 yrs	=	3.60%/yr

b. Facilities Capital Cost of Money Percent per Year (FCCM)

[(N-1)	x	(1+SLV)+2]	x	Discounted Money Rate	/	2N		
{1.e (1)}		{1.e (3)}		{appendix B}		{1.e (1)}		
[(25-1)	x	(1+ 0.10 + 2)]	x	2.80%	/	50	=	1.59%/yr

c. Total Ownership Percent per Year (DEPR + FCCM) = **5.19%/yr**

3. OWNERSHIP COSTS

a. Ownership Per Year

		Total Ownership Percent per Year		
Plant Value	x	(DEPR + FCCM)		
{1.a (7)(a)}		{2.c}		
$4,500,000.00	x	5.19%	=	$233,550.00/yr

b. Monthly Ownership Expense

Ownership per Year	/	Months Available per Year			
{3.a}		{1.d (1)}			
$233,550.00/yr	/	9 months/yr	rounded	=	$25,950.00/mo

Figure 4-2. Dredging Plant Ownership and Operating Rate Worksheet
Page 2 of 4

REGION 10

4. OPERATING COSTS

a. Fuel Cost

(1) Prime Engine Fuel

Fuel Factor {1.e (4)}	x	HP {1.a (5)}	x	Fuel Cost per Gallon {1.b (2)}		
0.045 gal/bhp-hr	x	3,730 hp	x	$ 2.71	=	$454.87/hr

(2) Secondary Engine Fuel

Fuel Factor {1.e (5)}	x	HP {1.a (6)}	x	Fuel Cost per Gallon {1.b (2)}		
0.039 gal/bhp-hr	x	2,475 hp	x	$ 2.71	=	$261.58/hr

(3) Total Fuel (Prime Engine Fuel + Secondary Engine Fuel) = $716.45/hr

b. Water, Lube, and Supplies (WLS) Cost

(1) Prime Engine WLS

WLS Factor {1.e (6)}	x	Hourly Fuel Cost {4.a (1)}		
22%	x	$454.87/hr	=	$100.07/hr

(2) Secondary Engine WLS

WLS Factor {1.e (6)}	x	Hourly Fuel Cost {4.a (2)}		
22%	x	$261.58/hr	=	$57.55/hr

(3) Total Fuel (Prime Engine WLS + Secondary Engine WLS) = $157.62/hr

c. Repair Cost

(1) Economic Adjustment Factor (EAF)

Economic Index Year of Use {1.c (2)}	/	Economic Index Acquisition Year {1.c (1)}		
8875	/	5771	=	1.538

(2) Repair Cost

Total Plant Value {1.a (7)}	x	RPR {1.e (7)}	x	EAF {4.c (1)}	x	LAF {1.b (1)}	/	Life in Hrs {1.e (2)}		
$ 4,500,000.00	x	1.30	x	1.538	x	1.21	/	130,000 hrs	=	$83.74/hr

Figure 4-2. Dredging Plant Ownership and Operating Rate Worksheet
Page 3 of 4

REGION 10

4. OPERATING COSTS (Continued)

d. Total Hourly Operating Cost (Fuel + WLS + Repairs)

Fuel	+	WLS	+	Repairs		
{4.a (3)}		{4.b (3)}		{4.c (2)}		
$716.45/hr	+	$157.62/hr	+	$83.74/hr	=	**$957.81/hr**

e. Monthly Operating Cost

Total Hourly Operating Cost	x	Hours Worked/Month		
{4.d}		{1.a (8)}		
$957.81/hr	x	500 hrs/mo	rounded =	$478,905.00/mo

5. TOTAL MONTHLY RATE

a. Ownership {3.b}	=	$25,950.00/mo
b. Operating {4.e}	=	$478,905.00/mo
c. Total Estimated Additive Items {1.a (9)}	=	$8,000.00/mo
d. TOTAL MONTHLY RATE {5.a} + {5.b} + {5.c}	=	**$512,855.00/mo**

6. STANDBY ALLOWANCE

a. Standard Hourly Standby Expense

Monthly Ownership	/	Max Hours/Day		
{3.b}		30.4 days/mo x 24 hrs/day		
$25,950.00/mo	/	730 hrs/mo	=	**$35.55/mo**

b. Generator Fuel Allowance for Dredge (An additional generator fuel allowance may be allowed under certain circumstances. This allowance is applicable to dredges only.)

Generator HP	/	Total Secondary HP	x	Secondary Fuel Cost		
{1.a (6)}		{1.a}		{4.a (2)}		
200 hp	/	2,475 hp	x	$261.58	=	**$21.14/hr**

c. TOTAL HOURLY STANDBY ALLOWANCE FOR DREDGE

Standby Expense	+	Generator Fuel Allowance		
{6.a}		{6.b}		
$35.55/mo	+	$21.14/hr	=	**$56.69/hr**

Figure 4-2. Dredging Plant Ownership and Operating Rate Worksheet

SECTION III: GEOGRAPHIC REGIONS

Engineer Pamphlet 1110-1-8 Construction Equipment Ownership and Operating Expense Schedule, Volume 1.

Volume 1 is for use in Region I, which includes the following states:

Connecticut
Maine
Massachusetts
New Hampshire
New Jersey
New York
Pennsylvania
Rhode Island
Vermont

Engineer Pamphlet 1110-1-8 Construction Equipment Ownership and Operating Expense Schedule, Volume 2.

Volume 2 is for use in Region II, which includes the following states:

Delaware
District of Columbia
Illinois (East of U.S. Highway 51)
Kentucky (East of U.S. Highway 51)
Indiana
Maryland
Michigan (Lower Peninsula)
Ohio
Virginia
West Virginia

Engineer Pamphlet 1110-1-8 Construction Equipment Ownership and Operating Expense Schedule, Volume 3.

Volume 3 is for use in Region III, which includes the following states:

Alabama
Arkansas
Florida
Georgia
Louisiana
Mississippi
Missouri (Panhandle South of 36° - 30'00")
North Carolina
South Carolina
Tennessee

Engineer Pamphlet 1110-1-8 Construction Equipment Ownership and Operating Expense Schedule, Volume 4.

Volume 4 is for use in Region IV, which includes the following states:

Iowa (North of U.S. Highway 20)
Michigan (Upper Peninsula)
Minnesota
Montana
North Dakota
South Dakota
Wisconsin
Wyoming

Engineer Pamphlet 1110-1-8 Construction Equipment Ownership and Operating Expense Schedule, Volume 5.

Volume 5 is for use in Region V, which includes the following states:

Colorado
Illinois (West of U.S. Highway 51)
Iowa (South of U.S. Highway 20)
Kansas
Kentucky (West of U.S. Highway 51)
Missouri (North of 36° -30'00")
Nebraska

Engineer Pamphlet 1110-1-8 Construction Equipment Ownership and Operating Expense Schedule, Volume 6.

Volume 6 is for use in Region VI, which includes the following states:

New Mexico
Oklahoma
Texas

Engineer Pamphlet 1110-1-8 Construction Equipment Ownership and Operating Expense Schedule, Volume 7.

Volume 7 is for use in Region VII, which includes the following states:

Arizona
California
Nevada
Utah

Engineer Pamphlet 1110-1-8 Construction Equipment Ownership and Operating Expense Schedule, Volume 8.

Volume 8 is for use in Region VIII, which includes the following states:

Idaho
Oregon
Washington

Engineer Pamphlet 1110-1-8 Construction Equipment Ownership and Operating Expense Schedule, Volume 9.

Volume 9 is for use in Region IX, which includes the following states:

Alaska

Engineer Pamphlet 1110-1-8 Construction Equipment Ownership and Operating Expense Schedule, Volume 10.

Volume 10 is for use in Region X, which includes the following states:

Hawaii

Engineer Pamphlet 1110-1-8 Construction Equipment Ownership and Operating Expense Schedule, Volume 11.

Volume 11 is for use in Region XI, which includes the following territory:

Puerto Rico

Engineer Pamphlet 1110-1-8 Construction Equipment Ownership and Operating Expense Schedule, Volume 12.

Volume 12 is for use in Region XII, which includes the following area:

Kwajalein Island

SECTION IV: USACE ACQUISITION INSTRUCTIONS

PART 5131 – CONTRACT COST PRINCIPLES AND PROCEDURES
SUBPART 31.1 — APPLICABILITY

31.105-100 Construction and Architect-Engineer (A-E) Contracts.
Consistent with FAR 31.105(d)(2)(i)(b), equipment ownership and operating costs will be determined using EP 1110-1-8, Construction Equipment Ownership and Operating Expense Schedule.

31.105-101 Special Contract Requirements.
The contracting officer will insert the SCR, Equipment Ownership and Operating Expense Schedule, in Section 00 73 00, in all solicitations and contracts for construction within the United States that are expected to exceed the micro-purchase threshold.

Equipment Ownership and Operating Expense Schedule (MAR 1995).

(a) This special contract requirement does not apply to terminations. See 52.249-5000, Basis for Settlement of Proposals, and FAR Part 49.

(b) Allowable cost for construction and marine plant and equipment in sound workable condition owned or controlled and furnished by a contractor or subcontractor at any tier will be based on actual cost data for each piece of equipment or groups of similar serial and series for which the Government can determine both ownership and operating costs from the contractor's accounting records. When both ownership and operating costs cannot be determined for any piece of equipment or groups of similar serial or series equipment from the contractor's accounting records, costs for that equipment will be based upon the applicable provisions of EP 1110-1-8 Construction Equipment Ownership and Operating Expense Schedule, Region X. Working conditions will be considered to be average for determining equipment rates using the schedule, unless specified otherwise by the contracting officer. For equipment not included in the schedule, rates for comparable pieces of equipment may be used or a rate may be

developed using the formula provided in the schedule. For forward pricing, the schedule in effect at the time of negotiations will apply. For retroactive pricing, the schedule in effect at the time the work was performed will apply.

(c) Equipment rental costs are allowable, subject to the provisions of FAR 31.105(d)(ii) and FAR 31.205-36, Rental Costs. Rates for equipment rented from an organization under common control, lease-purchase arrangements, and sale-leaseback arrangements, will be determined using the schedule, except that actual rates will be used for equipment leased from an organization under common control that has an established practice of leasing the same or similar equipment to unaffiliated lessees.

(d) When actual equipment costs are proposed and the total amount of the pricing action exceeds the SAT, the contracting officer will request the contractor to submit either certified cost or pricing data, or partial/limited data, as appropriate. The data must be submitted on Standard Form 1411, Contract Pricing Proposal Cover Sheet.

SECTION V: EFAR REFERENCE

The Engineer Federal Acquisition Regulation Supplement (EFARS) is RESCINDED by the USACE Acquisition Instruction, which was issued by USACE Head of Contracting Activity on March 18, 2013. EFARS can be referenced, as necessary, for any contracts issued before March 18, 2013. The applicable EFARS sections are included in the schedule in effect at the time the work was performed.

SECTION VI: OBTAINING PUBLICATION AND CHECKRATE

The Engineer Pamphlet (EP) 1110-1-8 Volumes 1-12 is available in PDF and can be viewed or downloaded at the official HQUSACE documents web page at http://www.usace.army.mil/ by selecting “Library” and selecting “Publications.” Select “USACE Publications” in the title bar. A dropdown menu will appear. From the dropdown menu, select “Engineer Pamphlets.” From there, use the search feature located under “Engineer Pamphlets” to enter and search for 1110-1-8. This will narrow the publication list down to one selection that contains the portal with all 12 volumes of EP 1110-1-8 in PDF format. Using the “Search Publications” feature at the top right of this web page will bring up not only a link to EP 1110-1-8, but also a list of publications that mention this EP.

Compact disks (CDs) are developed and distributed to a pre-publication mailing list. A limited number of additional CDs are produced and are available upon request.

Requests for CDs may be placed by sending an e-mail to CENWW-COST@usace.army.mil. When ordering, please give the following information and specify the quantity:

Title of Publication:	EP 1110-1-8, Construction Equipment Ownership and Operating Expense Schedule
Region:	Region I through XII
Volume No.	Volume No. 1 through No. 12
Media:	CD
Quantities:	

Other products are available at the Walla Walla District Cost Engineering website: http://www.nww.usace.army.mil/Missions/CostEngineering.aspx. Expand the Product Support Section by clicking on the plus sign next to "Construction Equipment Rates (EP 1110-1-8) and CHECKRATE." The following links and downloads are available:

Previous editions of Engineers Pamphlet EP 1110-1-8. To access, select "Historical Construction Equipment Rates (past issues of EP 1110-1-8)." The direct link to past editions is: http://www.nww.usace.army.mil/Missions/CostEngineering/Historical.aspx.

CHECKRATE. To access, select "Download CHECKRATE (Excel-based program)." The direct link to download the CHECKRATE workbook is:

http://www.nww.usace.army.mil/Portals/28/docs/costengineering/CheckRate04v06r1.xls.

WORKSHEET FOR LAND-BASED EQUIPMENT

Use this worksheet to compute an hourly rate for equipment that is not in this pamphlet or is in the pamphlet but not equivalent in size, capacity, horsepower, or value.

1. EQUIPMENT INFORMATION AND EXPENSE FACTORS ID No: _____

a.

(1) Equipment Description

_____

(2) Model and Series _____

(3) Present Year or Year of Use _____

(4) Year Manufactured _____

(5) Horsepower - Equipment _____

(6) Horsepower - Carrier _____

(7) Fuel - Equipment _____

Fuel - Carrier _____

(8) Shipping Weight (cwt) _____ cwt

(9) Tire size and number of tires: (Cost of tires based on present year; see 1.a (3) and app. F):

	Size/Ply	App F Code	No.	Unit Price	Cost
(a) Front (FT)				$	$
(b) Drive (DT)				$	$
(c) Trailing (TT)				$	$
(d) **Total Tire Cost**					**$**

(10) List Price + Accessories

[at Year of Manufacture] $ _____ OR Actual Purchase Price: $ _____

USE APPENDIX D TO OBTAIN THE FOLLOWING DATA

b. Category and Subcategory _____

c. Hourly Expense Calculation Factors

(1) Economic Key (EK) _____

(2) Operating Condition (C): A = Average, D = Difficult, S = Severe _____

(3) Discount Code (DC): B = 7.5%, S = 15% _____ %

(4) Life in Hours _____

(5) Salvage Value Percentage _____

(6) Fuel Factor - Equipment _____

(7) Fuel Factor - Carrier _____

(8) Filter, Oil, and Grease (FOG) _____

(9) Tire Wear Factor

(a) Front (FT) _____

(b) Drive (DT) _____

(c) Trailing (TT) _____

(10) Repair Cost Factor (RCF) _____

2. EQUIPMENT VALUE

a. List Price + Accessories [At year of Manufacture] = $ _____

(1) Discount (List Price {1.a (10)} + Accessories) x Discount Code {1.c (3)}

($ _____ + $ _____) _____ % -$ _____

(2) Subtotal {2.a} - {2.a (1)} Subtotal = $ _____

(3) Sales or Import Tax Subtotal {2.a (2)} x Tax Rate {appendix B}

$ _____ x _____ % = $ _____

(4) Total Discounted Price: Subtotal 2.a (2) + 2.a (3) Subtotal = $ _____

b. Freight Shipping Weight {1.a (8)} x Freight Rate per cwt {appendix B}

_____ cwt x $ _____ = $ _____

c. **TOTAL EQUIPMENT VALUE (TEV):** **TOTAL [2]** = **$**

{2.a (4)} + {2.b} OR actual purchase price {1.a (10)}

(See chapter 3 for used and overage equipment rate adjustments.)

---

3. DEPRECIATION PERIOD (N)

a. LIFE {1.c (4)} / Working Hours Per Year (WHPY) = N {appendix B}

_____ hrs / _____ hrs/year = _____ years (N)

---

4. OWNERSHIP COST

a. Depreciation

(1) Tire Cost Index (TCI) (USE EK = 100 in appendix E)

Tire Index, Year of Manufacture {1.a (4)} / Tire Index, Year of Use {1.a (3)} = Tire Cost Index (TCI)

_____ / _____ = _____

(2) [TEV {2.c} x (1 - SLV {1.c (5)}) - (TCI {4.a (1)} x Tire Cost {1.a (9)(d)})] / Life {1.c (4)}

[$ _____ x (1 - _____) - (_____ x $ _____)] / _____ hrs = $ _____ /hr

4. OWNERSHIP COST (Continued)

b. Facilities Capital Cost of Money (FCCM)

(1) [(N - 1.0) {3.a}] x [(1 + SLV) {1.c.5}] + 2.0] / [(2.0 x N) {3.a}] = Average Value Factor (AVF)

[(- 1)] x [(1 +)] + 2.0] / [(2 x)] = _____

(2) TEV {2.c} x AVF {4.b (1)} x Adjusted Cost of Money {appendix B} / WHPY {appendix B}

$ _____ x _____ x _____ % / _____ hrs/yr = $ _____ /hr

c. **TOTAL HOURLY OWNERSHIP COST** **TOTAL [4] = $ /hr**

{4.a (2)} + {4.b (2)}

5. OPERATING COST

a. Fuel Costs

(1) Equipment

Fuel Factor {1.c (6)} x Horsepower {1.a (5)} x Fuel Cost Per Gallon {appendix B}

_____ x _____ x _____ /gal = $ _____ /hr

(2) Carrier

Fuel Factor {1.c (7)} x Horsepower {1.a (6)} x Fuel Cost Per Gallon {appendix B}

_____ x _____ hp x $ _____ /gal = $ _____ /hr

(3) Total Hourly Fuel Cost

{5.a (1)} + {5.a (2)} **Total [5.a] = $ /hr**

b. FOG Cost

(1) Equipment

FOG Factor {1.c (8)} x Equipment Hourly Fuel Cost {5.a (1)} x Labor Adjustment Factor LAF {appendix B}

_____ x $ _____ /hr x _____ = $ _____ /hr

5. OPERATING COST (Continued)

(2) Carrier

FOG Factor {1.c (8)}	x	Carrier Hourly Fuel Cost {5.a (2)}	x	LAF {appendix B}		
_____	x	$ _____ /hr	x	_____	=	$ _____ /hr

(3) Total Hourly FOG Cost

{5.b (1)} + {5.b (2)} **Total [5.b] = $ _____ /hr**

c. Alternative Fuel/FOG Cost **Total [5.c] = $ _____ /hr**

(See chapter 2, paragraph 2.24.d for guidance on when to use.)

d. Repair Cost

(1) Economic Adjustment Factor (EAF)

EK is from {1.c (1)}

Economic Index, Year of Use {1.a (3)} appendix E, EK = {1.c (1)}	/	Economic Index, Year of Manufacture {1.a (4)} appendix E, EK = {1.c (1)}	=	
_____	/	_____	=	_____

(See table 3-1 for last year of economic life.)

(2) Repair Factor (RF)

RCF {1.c (10)}	x	EAF {5.d (1)}	x	LAF {appendix B}	=	
_____	x	_____	x	_____	=	_____

(3) Repair Cost

[TEV {2.c}	-	(TCI {4.a (1)}	x	Tire Cost)] {1.a (9)(d)}	x	RF {5.d (2)}	/	LIFE	
[$ _____	-	(_____	x	$ _____)]	x	_____	/	_____	hrs

(4) Total Hourly Repair Cost **Total [5.d] = $ _____ /hr**

5. OPERATING COST (Continued)

e. Tire Wear Cost. (Use current price levels. See appendix F.)

(1) Front Tires (FT)

(1.5 x FT Cost) {1.a (9)(a)}	/	(1.8 x FT Wear Factor {1.c (9)(a)}	x	Maximum Tire Life Hours) {appendix F}	
(1.5 x $)	/	(1.8 x	x	hrs)	= $ /hr

(2) Drive Tires (DT)

(1.5 x DT Cost) {1.a (9)(b)}	/	(1.8 x DT Wear Factor {1.c (9)(b)}	x	Maximum Tire Life Hours) {appendix F}	
(1.5 x $)	/	(1.8 x	x	hrs)	= $ /hr

(3) Trailing Tires (TT)

(1.5 x TT Cost) {1.a (9)(c)}	/	(1.8 x TT Wear Factor {1.c (9)(c)}	x	Maximum Tire Life Hours) {appendix F}	
(1.5 x $)	/	(1.8 x	x	hrs)	= $ /hr

(4) Total Tire Wear Cost **Total [5.e] = $ /hr**

f. Tire Repair Cost

Total Tire Wear Cost/Hour {5.e (4)}	x	(0.15 x LAF) {appendix B}	
$	x	(0.15 x)	**Total [5.f] = $ /hr**

g. TOTAL HOURLY OPERATING COST

Sum {5.a} through {5.f} **Total [5] = $ /hr**

a. Total Hourly Rate: (Based on 40 hours per week).

Ownership Cost {4.c}	+	Operating Cost {5.g}	=	
$ _____	+	$ _____	=	**$ /hr**

---

b. Other Work Shifts Hourly Rate:

(Refer to chapter 3, Adjustments to Rates, for methodology.)

Depreciation {4.a (2)}	+	(FCCM {4.b (2)}	x	40 hr/wk	/	Work hr/wk)	+	Operating Cost {5.g}	=	
$ _____ /hr	+	($ _____ /hr	x	40 hr/wk	/	_____ hr/wk)	+	$ _____ /hr	=	**$ /hr**

---

c. Standby Hourly Rate:

(Refer to chapter 2, paragraph 2.28 for guidance on use.)

(Depreciation {4.a (2)}	x	0.50)	+	FCCM {4.b (2)}	=	
($ _____ /hr	x	0.50)	+	$ _____ /hr	=	**$ /hr**

(Refer to chapter 3, paragraph 3.12 for guidance for overage equipment.)

See chapter 3 if rate adjustments are necessary.

WORKSHEET FOR MARINE EQUIPMENT

Use this worksheet to compute a monthly and hourly rate for marine and dredging plant.

ID No: _____

1. MARINE AND DREDGING PLANT INFORMATION AND EXPENSE FACTORS

a. Plant Pertinent Data

(1) Equipment Description _____

(2) Model and Series _____

(3) Present Year or Year of Use _____

(4) Acquisition Year _____

(5) Horsepower (hp) - Prime _____

(6) Horsepower (hp) - Secondary Engine(s)

(a) Electrical Generators _____ hp

(b) Hydraulic System _____ hp

(c) Cutter Head Drive _____ hp

(d) Hydraulic Water Jet _____ hp

Total Secondary hp **hp**

(7) Plant Value

(a) Acquisition Costs $ _____

(b) Capital Improvements $ _____

Total Plant Value **$**

(8) Hours worked Per Month (Effective Time) _____ hrs/mo

(9) Additive Item(s) (Monthly Costs to be Estimated)

(a) _____ $ _____ /mo

(b) _____ $ _____ /mo

(c) _____ $ _____ /mo

(d) _____ $ _____ /mo

(e) _____ $ _____ /mo

Total Additive Items **$** **/mo**

b. Appendix B, Area Factors Data

(1) Labor Adjustment Factor (LAF) _____

(2) Fuel Type _____

Fuel Cost Per Gallon $ _____

(3) Cost of Money Rate (discounted) _____ %

c. Appendix E, Economic Index Data (EK 105)

(1) Economic Index, Acquisition Year _____

(2) Economic Index, Present Year or Year of Use _____

Input data, methodology, and notes used in the following sections of this form are, or have reference to, EP 1110-1-8, CONSTRUCTION EQUIPMENT OWNERSHIP AND EXPENSE SCHEDULE (see chapter 4).

Dredging Plant Ownership and Operating Rate Worksheet Page 1 of 4

1. MARINE AND DREDGING PLANT INFORMATION AND EXPENSE FACTORS (Continued)

d. Figure 4-1, Available Time to Dredge By Region Data. *(See paragraph 4.3 for guidance.)*

(1) Months Available Per Year *(9 months is used for this example)* _____ months/yr

e. Table 4-1, Dredging Plant Cost Factors Data

(1) Useful Life (in Years) for Ownership (N) _____ yrs

(2) Physical Life (in Hours) for Repairs _____ hrs

(3) SLV (Salvage Value Factor) _____

(4) Prime Engine Fuel Factor (gal/bhp-hr) _____

(5) Secondary Engine Fuel Factor (gal/bhp-hr) _____

(6) WLS (Water, Lube, and Supplies Factor) percent _____ %

(7) RPR (Repair Cost Factor) _____

2. ANNUAL OWNERSHIP PERCENTAGE FACTORS

a. Depreciation Percent Per Year (DEPR)

(1.0 - SLV)	/	N	
{1.e (3)}		{1.e (1)}	
(1.0 - _____)	/	_____ yrs	= _____ %/yr

b. Facilities Capital Cost of Money Percent Per Year (FCCM)

[(N-1)	x	(1+SLV)+2]	x	Discounted Money Rate	/	2N	
{1.e (1)}		{1.e (3)}		{appendix B}		{1.e (1)}	
[(_____ - 1)	x	(1 + _____)+2]	x	_____ %	/	_____	= _____ %/yr

c. Total Ownership Percent Per Year (DEPR + FCCM) = **%/yr**

3. OWNERSHIP COSTS

a. Ownership Per Year

Plant Value	x	Total Ownership Percent Per Year (DEPR + FCCM)	
{1.a (7)(a)}		{2.c}	
$ _____	x	_____ %	= $ _____ /yr

b. Monthly Ownership Expense

Ownership Per Year	/	Months Available Per Year		
{3.a}		{1.d (1)}		
$ _____ /yr	/	_____ months/yr	rounded	= $ _____ /mo

4. OPERATING COSTS

a. Fuel Cost

(1) Prime Engine Fuel

Fuel Factor {1.e (4)}	x	HP {1.a (5)}	x	Fuel Cost Per Gallon {1.b (2)}		
gal/bhp-hr	x	hp	x	$	=	$ /hr

(2) Secondary Engine Fuel

Fuel Factor {1.e (5)}	x	HP {1.a (6)}	x	Fuel Cost Per Gallon {1.b (2)}		
gal/bhp-hr	x	hp	x	$	=	$ /hr

(3) Total Fuel (Prime Engine Fuel + Secondary Engine Fuel) = **$ /hr**

b. Water, Lube, and Supplies (WLS) Cost

(1) Prime Engine WLS

WLS Factor {1.e (6)}	x	Hourly Fuel Cost {4.a (1)}		
%	x	$ /hr	=	$ /hr

(2) Secondary Engine WLS

WLS Factor {1.e (6)}	x	Hourly Fuel Cost {4.a (2)}		
%	x	$ /hr	=	$ /hr

(3) Total Fuel (Prime Engine WLS + Secondary Engine WLS) = **$ /hr**

c. Repair Cost

(1) Economic Adjustment Factor (EAF)

Economic Index Year of Use {1.c (2)}	/	Economic Index Acquisition Year {1.c (1)}		
	/		=	

(2) Repair Cost

Total Plant Value {1.a (7)}	x	RPR {1.e (7)}	x	EAF {4.c (1)}	x	LAF {1.b (1)}	/	Life in Hrs {1.e (2)}		
$	x		x		x		/	hrs	=	$ /hr

4. OPERATING COSTS (Continued)

d. Total Hourly Operating Cost (Fuel + WLS + Repairs)

Fuel {4.a (3)}	+	WLS {4.b (3)}	+	Repairs {4.c (2)}		
$ _____ /hr	+	$ _____ /hr	+	$ _____ /hr	=	**$ _____ /hr**

e. Monthly Operating Cost

Total Hourly Operating Cost {4.d}	x	Hours Worked/Month {1.a (8)}		
$ _____ /hr	x	_____ hrs/mo	rounded =	$ _____ /mo

5. TOTAL MONTHLY RATE

a. Ownership {3.b} = $ _____ /mo

b. Operating {4.e} = $ _____ /mo

c. Total Estimated Additive Items {1.a (9)} = $ _____ /mo

d. TOTAL MONTHLY RATE = **$ _____ /mo**
{5.a} + {5.b} + {5.c}

6. STANDBY ALLOWANCE

a. Standard Hourly Standby Expense

Monthly Ownership {3.b}	/	Max Hours/Day 30.4 days/mo x 24 hrs/day		
$ _____ /mo	/	_____ hrs/mo	=	**$ _____ /mo**

b. Generator Fuel Allowance for Dredge. (An additional generator fuel allowance may be allowed under certain circumstances. This allowance is applicable to dredges only.)

Generator HP {1.a (6)}	/	Total Secondary HP {1.a}	x	Secondary Fuel Cost {4.a (2)}		
_____ hp	/	_____ hp	x	$ _____	=	**$ _____ /hr**

c. TOTAL HOURLY STANDBY ALLOWANCE FOR DREDGE

Standby Expense {6.a}	+	Generator Fuel Allowance {6.b}		
$ _____ /mo	+	$ _____ /hr	=	**$ _____ /hr**

LEFT BLANK INTENTIONALLY

HAWAII
Region: 10

Total State Sales or Import Tax Rate:	4.25%
Working Hours Per Year (WHPY):	1,520 hrs/yr
Labor Adjustment Factor (LAF):	1.21
Electricity Cost Per Kilowatt-Hour:	$0.265 /kW-H
Gasoline Cost Per Gallon:	$3.56 /gal
Diesel Cost Per Gallon (Off-Road Use):	$3.44 /gal
Diesel Cost Per Gallon (On-Road Use):	$4.15 /gal
Cost-of-Money Rate (Full Rate):	3.500%
Cost-of-Money Rate (Adjusted):	2.800%

Freight Rates

Appendix C
Guide for Selecting Operating Conditions

EQUIPMENT TYPE	AVERAGE	SEVERE
B25 and B35: Buckets Clamshell or Dragline Depreciation Period:	Working in gravels, silts, and sands at low impact, freshwater environment. 8,000-10,000 hours	Working in rock, hard digging, high impact, or saltwater environment. 6,500-8,000 hours
C80 and C90: Cranes Hydraulic, Truck Mounted Mechanical, Truck Mounted Depreciation Period:	Lift less than rated capacity, intermittent duty. 14,000-20,000 hours	Continuous lift near rated capacity, excessive swing, abrasive materials, sloped surfaces, and saltwater environment. 12,000-18,000 hours
C85: Cranes Mechanical Dragline, Lifting, or Clamshell Crawler Mounted Depreciation Period:	Gravels, silts, pull, and lift less than rated capacity. 14,000-22,000 hours	Highly abrasive materials, impact breakout, continuous load near rated capacity, and saltwater environment. 12,000-18,000 hours
G10: Generators Depreciation Period:	Working below rated capacity, good field conditions. 8,000-10,000 hours	Working at or above rated capacity, poor field conditions, such as saltwater. 7,000-8,000 hours

EQUIPMENT TYPE	AVERAGE	SEVERE
G15: Graders, Motor	Haul road maintenance; road construction, ditching; loose fill spreading; landforming; summer road maintenance with medium to heavy winter snow removal; and elevating grader use.	Maintenance of hard-packed roads with embedded rock; heavy fill spreading; ripping/scarifying of asphalt or concrete; continuous high load factor; and high impact.
Depreciation Period:	14,500 hours	13,500 hours
H25: Hydraulic Excavators Crawler Mounted	Mass excavation or trenching where machine digs all the time in natural bed clay soils; some traveling and steady, full-throttle operation; and most log loading operations.	Continuous trenching or truck loading in rock or shot rock soils; large amount of travel over rough ground; machine continuously working on rock floor with constant high load factor and high impact; and saltwater environment.
Depreciation Period:	8,500-19,000 hours	7,000-15,000 hours
H30: Hydraulic Excavators Wheel Mounted	Continuous digging in sandy clay/sandy gravel; site development; and lumber yard applications.	Continuous digging in rock/natural bed clay; high impact using hammer; and working in forests or quarries.
Depreciation Period:	8,000-10,000 hours	6,500-8,000 hours

EQUIPMENT TYPE	AVERAGE	SEVERE
H35: Hydraulic Shovels Crawler Mounted (nonelectric)	Continuous loading in well-shot rock or fairly tight bank. Good underfoot conditions: Dry floor; little impact; or sliding on undercarriage.	Continuous loading in poorly shot rock, virgin, or lightly blasted tight banks. Adverse underfoot conditions: Rough floors; high impact sliding on undercarriage; and saltwater environment.
Depreciation Period:	14,000-18,000 hours	12,000-16,000 hours
L10: Land Clearing Equipment	Working in low impact conditions at or below rated capacity.	High impact conditions working at or above rated capacity.
Depreciation Period:	10,000 hours	7,000 hours
L30: Loaders, Belt (Conveyors)	Working below rated capacity, with intermittent service.	Working at or above rated capacity with continuous service.
Depreciation Period:	10,000 hours	8,000 hours
L35: Loaders, Front End Crawler Type	Bank excavation, intermittent ripping, basement digging of natural bed clays, sands, silts, and gravels; some traveling; and steady full throttle operations.	Loading shot rock, cobbles, glacial till, and caliche; steel millwork; high density materials in standard bucket; continuous work on rock surfaces; large amount of ripping of tight rock materials; high impact conditions; and saltwater environment.
Depreciation Period:	10,000 hours	8,000 hours

EQUIPMENT TYPE	AVERAGE	SEVERE
L40: Loaders, Front End Wheel Type (does not include skid steer and tool carriers)	Continuous truck loading from stockpile; low- to medium-density materials in properly sized bucket; hopper charging in low- to medium-rolling resistance; loading from bank in good digging; and load and carry on poor surfaces and slight adverse grades.	Loading shot rock (large loaders); handling high-density materials with counterweighted machine; steady loading from very tight banks; continuous work on rough or very soft surfaces; load and carry in hard digging; travel longer distances on poor surfaces with adverse grades and saltwater environment.
Depreciation Period:	9,250-13,500 hours	8,750-12,000 hours
L45 and L50: Loaders with Backhoe Crawler Type and Wheel Type	Utility applications in medium to heavy soil; occasional use of constant flow implements and dig depths to 3.05 meters (10 feet).	Production applications or digging in rock; regular use of constant-flow implements; and dig depths over 3.05 meters (10 feet).
Depreciation Period:	8,000 hours	6,000 hours
L60: Log Skidders	Continuous turning, steady skidding for medium distances with moderate decking. Good underfooting: Dry floor with few stumps and gradual rolling terrain.	Continuous turning, steady skidding for long distances with frequent decking; poor underfoot conditions: Wet floor, steep slopes, and numerous stumps; and saltwater environment.
Depreciation Period:	10,000 hours	8,000 hours

EQUIPMENT TYPE	AVERAGE	SEVERE
M10 - .31 and .32: Clamshell dredges < 5 cy Amphibious Excavator Depreciation Period:	Gravel; silts; breakout force at less than capacity; freshwater conditions. 10,000-20,000 hours	Rock; abrasive materials; load at rated capacity; saltwater conditions. 9,000-18,000 hours
M10 - .51 and .53: Boats, Skiffs, Crew Boats, Work Boats, Survey Boats, and Launches Depreciation Period:	Freshwater applications; light waves; and steady to light use. 16,000-18,000 hours	Saltwater use; medium to high waves; heavy use. 13,000-15,000 hours
P35: Pipelayers Depreciation Period:	Typical pipelayer use in operating conditions ranging from very good to severe. 14,000 hours	Continuous use in deep mud or water or on rock surfaces. 11,500 hours
R10: Rippers and Bank Slopers Depreciation Period:	Light rock, medium breakout force required. 8,000 hours	Hard rock, excessive wear due to high breakout force. 6,500 hours
S10, S15, S20, and S25: Scrapers Self-Propelled Tractor Drawn Soil Stabilizers Depreciation Period:	Varying loading and haul road conditions; long and short hauls; adverse and favorable grades; some impact; and typical road-building use on a variety of jobs. 10,000-15,000 hours	High impact conditions, such as loading ripped rock; overloading; continuous high total resistance conditions; and rough haul roads. 8,000-13,500 hours

EQUIPMENT TYPE	AVERAGE	SEVERE
T15: Tractors Crawler (Dozer)	Production dozing in clays, sands, gravels, and talus rock. Push-loading scrapers; borrow pit ripping; most land clearing and skidding applications. Medium impact conditions. Production landfill work.	Heavy rock ripping; tandem ripping; pushloading and dozing in hard rock; work on rock surfaces; continuous high impact conditions; and saltwater environment.
Depreciation Period:	10,000-15,000 hours	8,000-12,500 hours
T20: Tractors Wheel Type (Dozer)	Production dozing; push loading in clays, sands, silts, loose gravels; and shovel cleanup.	Production dozing in rock; push loading in rocky, boulder-strewn borrow pits; high impact conditions; and landfill compactor work.
Depreciation Period:	14,000 hours	13,000 hours
T30: Trenchers Chain and Wheel Type	Working in sands and silts below rated capacity of the machine.	Working in gravels and abrasive materials at or above the rated capacity of the machine.
Depreciation Period:	8,000 hours	6,000 hours
T45 and T50: Truck Trailers Trucks, Highway	Varying loading and road conditions; and typical construction use on a variety of jobs.	Consistently poor road conditions; and oversized loading equipment.
Depreciation Period:	8,000-12,000 hours	6,500-10,000 hours

EQUIPMENT TYPE	AVERAGE	SEVERE
T55 and T60: Truck, Off-Highway Trucks, Water, Off-Highway (Articulated and Rigid)	Varying load and haul road conditions; high rolling resistance and poor traction during part of the job; some adverse grades; some impact loads; and typical use in road building, dam construction, open-pit mining, etc.	Continuous use on very poorly maintained haul roads; high rolling resistance, and poor traction; frequent adverse grades and high impact loads; and poorly matched loading equipment with continuous overloading.
Depreciation Period:	12,000-20,000 hours	10,000-18,000 hours
W10 and W15: Wagons Bottom Dump Rear Dump	Varying load and haul road conditions; long and short hauls; high rolling resistance and poor traction during part of the job; some adverse grades; some impact; typical road building use in a variety of jobs; and dam construction, open-pit mining, etc.	Continuous use on very poorly maintained haul roads; high rolling resistance, and poor traction; high impact conditions, such as loading ripped rock; frequent adverse grades and high impact loads; and poorly matched loading equipment with continuous overloading.
Depreciation Period:	12,000 hours	10,000 hours

Appendix G
Tire Life and Tire Wear Factors

SECTION I. TIRE WEAR FACTORS

The tire wear factors used in this pamphlet are listed in appendix D. The “useful life” of a new tire is the product of Condition Factors (CF) from I through V, the Wheel Position Factor (WPF), the Grade Factor (GF) (for Drive Tires only) and the Miscellaneous Condition (MC). These factors provide a percentage reduction to the maximum tire life. See chapter 2 for tire cost methodology.

Condition Factors, Wheel Position Factors, Grade Factor, and Miscellaneous Condition are derived from the Caterpillar Performance Handbook.

The factors shown below are examples specifically for a bottom dump wagon.

	Condition Factors (CF):		**Average**	**Severe**
I.	Maintenance		0.981	0.763
II.	Speed		0.872	0.763
III.	Surface Condition		0.981	0.763
IV.	Loads		0.981	0.709
V.	Curves		0.981	0.872
CF	**Product of the factors (I x II x III x IV x V)**		**0.808**	**0.275**
VI.	**Wheel Position Factors (WPF):**			
	WPF-FT	Front Tire (FT)	0.981	0.981
	WPF-DTR	Drive Tire (DT) - Bottom Dump	0.872	0.872
	WPF-TT	Trailing Tire (TT)	1.090	1.090
VII.	**Grade Factor (GF) (Drive Tires Only)**		0.981	0.872
VIII.	**Miscellaneous Condition (MC)**		0.981	0.981

SECTION I. TIRE WEAR FACTORS (Continued)

Example: Final Tire Wear Factors for Wagon, Rear Dump
(See appendix D, category W15)

	Average	Severe
Front Tire-Average = (CF = 0.808)(WPF-FT = 0.981)(MC = 0.981)	0.78	
Front Tire-Severe = (CF = 0.275)(WPF-FT = 0.981)(MC = 0.981)		0.26
Drive Tire-Average = (CF = 0.808)(WPF-DTR = 0.872)(GF = 0.981)(MC = 0.981)	0.68	
Drive Tire-Severe = (CF = 0.275)(WPF-DTR = 0.872)(GF = 0.872)(MC = 0.981)		0.20
Trailing Tire-Average = (CF = 0.808)(WPF-TT = 1.090)(MC = 0.981)	0.86	
Trailing Tire-Severe = (CF = 0.275)(WPF-TT = 1.090)(MC = 0.981)		0.29

SECTION II. MAXIMUM TIRE LIFE

Maximum tire life is used in the formula to determine tire wear cost. It is located in appendix F and categorized by tire type.

Appendix J
Equipment Accessories

The following accessories are listed by category (CAT), subcategory (SUB), and description (including features required for safety). The accessories have been included with the major equipment listed in this pamphlet when they are not included with the basic cost and are offered by the manufacturer.

CAT SUB	DESCRIPTION
C85.10	**CRANES, DRAGLINE AND CLAMSHELL, CRAWLER MOUNTED**
	Power load lowering
	Independent swing and travel
	Third drum
	Torque converter [machines 1 1/2 cubic yard (cy) or larger]
	Approximately one-half maximum boom length
	Counterweight (standard)
	Fire extinguisher 5-B:C
	Swing and reverse signal (backup) alarm
	Boom angle indicator and a load-indicating device
	Drum rotation indicators
	Anti-two block (upper limit) devices
	Manufacturers' mandatory accessories
C85.20	**CRANES, LIFTING, CRAWLER MOUNTED**
	Power load lowering
	Independent swing and travel
	Third drum
	Torque converter (machines 25 tons or larger)
	One-half maximum boom length (machines less than 60 tons)
	Maximum boom length at 360 degree rating (machines larger than 60 tons)
	Counterweight (standard)
	Fire extinguisher 5-B:C
	Swing and reverse signal (backup) alarm
	Boom angle indicator and a load-indicating device
	Drum rotation indicators
	Anti-two-block (upper limit) devices
	Manufacturers' mandatory accessories
	Hook block on machines larger than 100 tons

CAT SUB	DESCRIPTION
C90.01	**TRUCK CRANES - LESS THAN 25 TONS**
	Power load lowering
	Third drum
	Mechanical outriggers with screw jacks
	Maximum boom length at 360 degrees rating
	Counterweight (standard)
	Fire extinguisher 5-B:C
	Swing and reverse signal (backup) alarm
	Boom angle indicator and a load-indicating device
	Drum rotation indicators
	Anti-two-block (upper limit) devices
	Manufacturers' mandatory accessories
C90.02	**TRUCK CRANE - 25 TONS AND LARGER**
C90.03	Power load lowering
C90.04	Third drum
	Hydraulic outriggers with screw jacks
	Torque converter when available (upper only)
	Maximum boom length at 360 degrees rating
	Counterweight (standard)
	Fire extinguisher 5-B:C
	Reverse signal (backup) alarm
	Boom angle indicator and a load-indicating device
	Drum rotation indicators
	Anti-two-block (upper limit) devices
	Hook block on machines larger than 100 tons
G15	**GRADER**
	Rollover protective structures (ROPS) with enclosed cab
	Ripper/scarifier, rear mounted
	Front wheel lean
	Power circle
	Hydraulic shift and tilt moldboard
	End bits
	Standard work lights
	Fire extinguisher 5-B:C
	Reverse signal (backup) alarm

CAT SUB	DESCRIPTION
H25	**EXCAVATORS, HYDRAULIC**
H30	Backhoe bucket (standard) Backhoe stick (medium length) Backhoe boom (one piece) Backhoe bucket linkage (with cylinder) Guards Counterweight Standard work lights Reverse signal (backup) alarm ROPS Fire extinguisher 5-B:C
H35	**HYDRAULIC SHOVELS - CRAWLER MOUNTED** Torque converter (machines 1 1/2 cy or larger) Counterweight Reverse signal (backup) alarm ROPS Fire extinguisher 5-B:C
L30	**LOADERS, BELT (CONVEYOR BELTS)** Power unit Head pulley clutch and backstop Belt cleaner and belt installing equipment King pin attachments
L35	**LOADERS, 1 1/2 CY AND LARGER**
L40	Blower fan Guard, power train Automatic bucket positioner Standard counterweight Machines less than 7 cy: General purpose or excavating bucket with bolt on cutting edge and no teeth Machines 7 cy or larger: Rock bucket with bolt on cutting edge and teeth Standard work lights Reverse signal (backup) alarm ROPS Fire extinguisher 5-B:C

CAT SUB	DESCRIPTION
S10	**SCRAPERS**
S15	Control single lever
S20	Blower fan
	Standard work light
	Guards, power train
	Reverse signal (backup) alarm
	ROPS
	Fire extinguisher 5-B:C
	Supplemental steering
T15	**TRACTOR, CRAWLER**
	Hydraulic controls for ripper and blade
	Guards
	Blower fan
	Standard work lights
	Hook, front pull
	Track grousers (severe service for units over 200 hp)
	Counterweights where required
	Reverse signal (backup) alarm
	ROPS
	Universal blade
T20	**TRACTOR, WHEEL**
	Hydraulic controls for ripper and blade
	Guards
	Blower fan
	Standard work lights
	Blade
	Fire extinguisher 5-B:C
	Counterweights when required
T25	**TRACTOR, AGRICULTURAL**
	Independent power take off (PTO)
	Standard work lights
	Fire extinguisher 5-B:C
	Counterweights when required
	3-point hitch
	ROPS
	Hydraulic system with controls

CAT SUB	DESCRIPTION
T55	**TRUCKS, OFF-HIGHWAY** No spin differential Tachograph Engine and transmission guards Body liners

Ground-Engaging Components (GEC) are defined as those wear items on the machine that come in direct contact with in situ ground to perform the machine's primary function. For machines with blades, GEC can include: cutting edges, wear plates, hard facing, and end plates. For machines with buckets, GEC can include: bucket teeth, cutting edges, side cutters, and wear plates. For machines with rippers, GEC can include: tips and shank protectors. Equipment-specific wear items include those items of wear that are specific to that equipment. Not included in the Repairs and must be added as needed are: drill/bits, drill/steel, roadheader/rock breaking bits, air tools/breaker points/jackhammer points, concrete coring drill bits, and other wear items that are not shown here.
